

Red Giants and White Dwarfs

- As a star begins to use up its hydrogen, it fuses helium atoms together into heavier atoms such as carbon.
- A blue giant star has exhausted its hydrogen fuel and is in a transitional phase.
- When the light elements are mostly used up, the star can no longer resist gravity and starts to collapse inward.
- The outer layers of the star grow outward and cool. The larger, cooler star turns red in color and so is called a Red Giant.
