Methods for Serum-free Culture of Cells of the Endocrine System David William Barnes, David Andrew Sirbasku, Gordon Sato, 1984 Band 2 Methods for Serum-free Culture of Epithelial and Fibroblastic Cells David William Barnes, David Andrew Sirbasku, Gordon Sato, 1984 Band 3 *Methods for Serum-free Culture of Neuronal and Lymphoid Cells* David Andrew Sirbasku, Gordon Sato, 1984 **Methods In Animal Physiology** Zdenek Deyl, 2019-08-08 The aim of the present volume was to give an overview over different available methodological approaches The specialists may perhaps object that in their particular field the level of information is superficial However let them look at other chapters in which different approaches are discussed and which surely will appear less superficial from the more general point of view We hope at least that crucial references can be traced throughout the book that would enable the readers to go in more detail when desired It can be traced throughout the book that would enable the readers to go in more detail when desired It was really one of our ideas to draw the survey of possibilities available If this can stimulate the readers to use ideas to draw the survey of possibilities available If this can stimulate the readers to use other methods that those they are routinely using the goals will be met Journal of Electron Microscopy Technique ,1991 **Journal of the Royal Society of Medicine** Royal Society of Medicine (Great Britain), 1985 Includes selected papers from meetings of the Society and of its sections

Journal of Morphology ,1987 Teratology ,1988 Publishes original reports of studies in all areas of abnormal development and related fields It also welcomes reviews of topics of current significance and letters discussing papers that have appeared in Teratology or that deal with controversial scientific matters of interest to its readers *In Vitro Models for Cancer Research* ,1985 **The Encyclopedia of Cell Technology, 2 Volume Set** ,2000-02-08 The Encyclopedia of Cell Technology provides complete coverage of all aspects of both animal and plant cultures Coverage includes ethical and regulatory issues the basic science of cells and cell culture techniques and equipment used in growing cultures and harvesting product product development and classification licensing and patenting as well as the history of cell technology

Cancer Cell Culture Simon P. Langdon, 2008-02-01 The culture of cancer cells is routinely practiced in many academic research centers biotechnology companies and hospital laboratories Cancer Cell Culture Methods and Protocols describes easy to follow methods to guide both novice and more experienced researchers seeking to use new techniques in their laboratories Our present understanding of the cell and molecular biology of cancer has been derived mainly from the use of cultured cancer cells and we cover a number of the most widely used assays to study function in current use Part I introduces the basic concept of cancer cell culture and this is followed by a description of the general techniques used in many cell culture facilities The importance of cell line characterization is now widely recognized and methods to characterize and authenticate cell lines are described in Part II Part III covers the isolation and development of specific cancer cell types and provides valuable tips for those wishing to derive new cell line models A wide range of procedures encompassing many of the

key functional features of cancer cells are described in Part IV including assays to evaluate clonogenicity cell proliferation apoptosis adhesion migration invasion senescence angiogenesis and cell cycle parameters Methods to modify cancer cells are described in Part V including protocols for transfection development of drug resistance immortalization and transfer in vivo In Part VI methods of coculture of different cell types and contamination of cell lines are covered **Epithelia** C.J. Jones,2012-12-06 Epithelial cells probably constitute the most diverse group of cells found in the body In addition to serving as interfaces between external and internal environments their functions include ion and fluid secretion and reabsorption protein exocytosis hormone secretion recognition surface protection and the control of ciliary movement By their very exposure on the surfaces of the body epithelial cells are subjected to wide ranging assault by micro organisms and by chemical and physical forces They are the targets for abrasion infection and malignant transformation Some epithelial cells show altered behaviour in inherited syndromes such as cystic fibrosis characterized by serious pancreatic and pulmonary disease In view of the importance of epithelia and the fact that their function can be altered by environmental and inherited factors they are the subject of intensive research particularly so in the case of cancer where most tumours are of epithelial origin The use of animal tissues in epithelial research continues to provide important advances and this coupled with the need to focus more on human tissues has prompted a greater research emphasis on accessible human epithelia and on the establishment of cell cultures from animal and human sources For primary cell cultures and cell lines to be of value they need to express properties appropriate to their progenitors and relevant to the study in progress **Science** ,1985 Since Jan 1901 the official proceedings and most of the papers of the American Association for the Advancement of Science have been included in **Science** **Handbook of Endocrine Research Techniques** Flora de Pablo,Colin G. Scanes,Bruce D. Weintraub,1993-12-15 Written by experts in the field Handbook of Endocrine Research Techniques is currently the only single source of up to date methods and strategies particularly useful in endocrinological research As a resource for both the novice and experienced investigator the book includes chapters which provide an introduction to the area general concepts detailed protocols and extensive references **Books in Series** ,1985 Vols for 1980 issued in three parts Series Authors and Titles *The Endocrinology of Growth, Development, and Metabolism in Vertebrates* Martin Schreibman,Colin G. Scanes,Peter K.T. Pang,2012-12-02 The Endocrinology of Growth Development and Metabolism in Vertebrates provides an overview of vertebrate endocrinology This book aims to strengthen the bridge between medical and comparative endocrinologists by addressing the benefits that they can derive from this association Organized into five parts encompassing 24 chapters this volume starts with a discussion on the structure and biological function of growth hormone GH and prolactin PRL family This book then explains the extrinsic genetic and humoral factors that influence animal growth particularly in poikilotherms This text also elaborates the environmental conditions that affect the growth of poikilotherms including food availability temperature and photoperiod Other chapters discuss how somatotropin affects the growth development in

homeotherms such as livestock species The reader is also introduced to the metabolic actions of GH which can be described in terms of short lived insulin like effects Endocrinologists molecular endocrinologists biologists molecular biologists biochemists researchers and physicians will find this book extremely useful *Methods in Mammary Gland Biology and Breast Cancer Research* Margot M. Ip, Bonnie B. Asch, 2012-12-06 approaches to the experimental problems that still face us in understanding this most fascinating of organs Too many people contributed to the completion of this volume to allow acknowledgment of all the individual efforts but we particularly thank the reviewers whose input into the editorial process was invaluable and the authors of these chapters who revised their text sometimes more than once to bring it to the high standards set by the Editors The Committee gratefully acknowledges the support of Vysis Inc in the publication of a color figure in Chapter 19 by S Weber Hall and Trevor Dale Finally we wish to express our heartfelt appreciation to Margot Ip and Bonnie Asch who worked long and hard to bring this volume to fruition Margaret C Neville for the Committee on Mammary Gland Biology Preface One of the most exciting and beneficial developments in research on mammary gland biology and breast cancer has been the influx of increased funding to support this work This influx which has been due primarily to the tireless efforts of breast cancer activists to garner additional money from various federal and state sources has led to a rapid expansion of research efforts by attracting numerous new investigators into the field These new investigators include students postdoctoral fellows and scientists from other fields **Transplantation, Bioengineering, and Regeneration of the Endocrine Pancreas** Giuseppe Orlando, Lorenzo Piemonti, Camillo Ricordi, Robert J. Stratta, Rainer W.G. Gruessner, 2019-11-09 Transplantation Bioengineering and Regeneration of the Endocrine Pancreas Volume 1 sets a new standard in transplant and regenerative medicine The book details the state of the art in modern whole pancreas and islet transplantation including donor selection immunosuppression complications allograft pathology and more As regenerative medicine is changing the premise of solid organ transplantation this volume catalogs the technologies being developed and the methods being implemented to bioengineer or regenerate the endocrine pancreas in order to more effectively treat diabetes Edited and authored by unparalleled leaders in the field this new volume argues for a much needed synergy between organ transplantation and regenerative medicine Provides comprehensive and cutting edge knowledge of whole pancreas and islet transplantation Includes sections that address donor selection immunosuppression complications allograft pathology and more Offers an update on the progress of regenerative medicine research aimed at beta cells replacement in the treatment of diabetes **Studia biophysica**, 1985 **Human Hybridomas and Monoclonal Antibodies** Edgar Engleman, 2013-11-11 Soon after Kohler and Milstein described the use of somatic cell hybridization for the production of murine monoclonal antibodies of desired specificity this relatively simple technique became widely applied Indeed production of murine monoclonal antibodies is now considered routine by immunologists and nonimmunologists alike However as heterologous proteins mouse monoclonal antibodies have one major limitation they are immunogenic in man and hence their

use in vivo is severely limited. An obvious solution to this problem is to produce human hybridomas with the same techniques used for the production of rodent hybrids. Unfortunately the history of human hybridomas has been marked by substantive and often exasperating technical problems and the first reports of hybrids secreting human immunoglobulin of desired specificity did not appear until 1980. These reports were met with initial enthusiasm but it soon became apparent that while human lymphocytes might be fused their frequency level of Ig synthesis and stability were such that production of human antibodies with this method was neither routine nor practical. Nonetheless a sufficient number of investigators persevered and during the next 5 years relatively efficient B cell fusion partners as well as improved methods of Epstein Barr virus transformation were developed. Generation of human T T hybrids has also been achieved although problems of chromosomal stability remain a substantial obstacle more so than with B cell lines.
