Methods in Carbohydrate Chemistry, Lipopolysaccharides, Separation and Analysis, Glycosylated Polymers James N. BeMiller, Roy L. Whistler, Derek H. Shaw, 1993-03-08 A practical bench side reference for carbohydrate chemistry Methods in Carbohydrate Chemistry Lipopolysaccharides Separation and Analysis Glycosylated Polymers Volume 9 presents proven techniques for working with carbohydrates in the lab Topic experts contribute insights and protocols for membrane isolation and purification glycoprotein synthesis and carbohydrate immobilization with detailed guidance on chromatographic chemical enzymatic and physical methods of separation and analysis Helpful flow charts provide easy bench side reference while proven methods allow for predictable repeatable results Anyone who encounters carbohydrates in the lab will find value in this clear practical reference Food Carbohydrate Chemistry Ronald E. Wrolstad, 2011-10-31 Not since Sugar Chemistry by Shallenberger and Birch 1975 has a text clearly presented and applied basic carbohydrate chemistry to the quality attributes and functional properties of foods Now in Food Carbohydrate Chemistry author Wrolstad emphasizes the application of carbohydrate chemistry to understanding the chemistry physical and functional properties of food carbohydrates Structure and nomenclature of sugars and sugar derivatives are covered focusing on those derivatives that exist naturally in foods or are used as food additives Chemical reactions emphasize those that have an impact on food quality and occur under processing and storage conditions Coverage includes how chemical and physical properties of sugars and polysaccharides affect the functional properties of foods taste properties and non enzymic browning reactions the nutritional roles of carbohydrates from a food chemist's perspective basic principles advantages and limitations of selected carbohydrate analytical methods An appendix includes descriptions of proven laboratory exercises and demonstrations Applications are emphasized and anecdotal examples and case studies are presented Laboratory units homework exercises and lecture demonstrations are included in the appendix In addition to a complete list of cited references a listing of key references is included with brief annotations describing their important features Students and professionals alike will benefit from this latest addition to the IFT Press book series In Food Carbohydrate Chemistry upper undergraduate and graduate students will find a clear explanation of how basic principles of carbohydrate chemistry can account for and predict functional properties such as sweetness browning potential and solubility properties Professionals working in product development and technical sales will value Food Carbohydrate Chemistry as a needed resource to help them understand the functionality of carbohydrate ingredients And persons in research and quality assurance will rely upon Food Carbohydrate Chemistry for understanding the principles of carbohydrate analytical methods and the physical and chemical properties of sugars and polysaccharides Methods in carbohydrate chemistry Roy Lester Whistler, 1976 Carbohydrate Chemistry J S Brimacombe, 2007-10-31 Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year The amount of research in this field appearing in the organic chemical

literature is increasing because of the enhanced importance of the subject especially in areas of medicinal chemistry and biology In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology Clycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established for example by the preparation of specific carbohydrate based antigens especially cancer specific oligosaccharides and glycoconjugates Coverage of topics such as nucleosides amino sugars alditols and cyclitols also covers much research of relevance to biological and medicinal chemistry Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research Compiled by teams of leading authorities in the relevant subject areas the series creates a unique service for the active research chemist with regular in depth accounts of progress in particular fields of chemistry Subject coverage within different volumes of a given title is similar and publication is on an annual or biennial basis Handbook of Chromatography Vol I (1982) Shirley C. Churms, 2017-11-22 This handbook is intended to serve as a working manual and reference book for carbohydrate chemists and biochemists using the chromatographic methods that are indispensable in this field Emphsis is on newer methods such as high performance liquid chromatography HPLC and other automated liquid chromatography systems and the material included was compiled mainly from literature published during the years 1970 to 1978 Data appearing in Volumes I and II of the Handbook of Chromatography are not repeated here but references to relevant tables in Volumes I and II are given at the start of corresponding sections of this handbook In some cases material published before 1970 that was omitted from Volumes I and II of the series is included here this applies particularly to the sections dealing with paper chromatography and electrophoresis Analysis of Carbohydrates by GLC and MS Christopher J.
