

RESEARCH METHODOLOGIES

Research methodologies can roughly be categorized into three groups: quantitative, qualitative, and mixed-methods.

QUALITATIVE RESEARCH

Qualitative research investigates human experiences and behavior through non-numerical data collection and analysis.

QUANTITATIVE RESEARCH

Quantitative research examines relationships between variables using numerical data and statistical techniques.

MIXED METHODS RESEARCH

Mixed methods research combines qualitative and quantitative approaches to provide a more holistic understanding of a research question.

Methods In Development Research:

Handbook of Developmental Research Methods Brett Paul Laursen, Todd D. Little, Noel A. Card, 2011-11-03 This is the first methods handbook specifically designed to meet the needs of those studying development. Leading developmental methodologists present cutting edge analytic tools and describe how and when to use them in accessible nontechnical language. They also provide valuable guidance for strengthening developmental research with designs that anticipate potential sources of bias. Sections typically begin with an overview chapter on foundational issues. Subsequent chapters delve into specific techniques following a consistent format that encompasses basic issues, conceptual principles, and statistical assumptions, recent technical advances, developmental applications, and future directions. Research examples demonstrate the procedures in action and give readers a better understanding of how to match research questions to developmental methods. The companion website supplies data and program syntax files for many of the chapter examples.

Design and Development Research Rita C. Richey, James D. Klein, 2014-07-16 AECT Design: an examination of the critical types of information and data often gathered in studies and unique procedures for collecting these data; examples of data collection instruments as well as the use of technology in data collection; and a discussion of the process of extracting meaning from data and interpreting product and tool and model research findings. Design and Development Research is appropriate for both experienced researchers and those preparing to become researchers. It is intended for scholars interested in planning and conducting design and development research and is intended to stimulate future thinking about methods, strategies, and issues related to the field.

Methods in Development Research Jeremy Holland, John R. E. Campbell, 2005 This book situates current development research issues squarely within debates about development policy and social research and it will help begin the process of defining best practice in the use of participatory qualitative and quantitative methods of considerable interest to academics, practitioners, and policy makers.

Developmental Research Methods Scott A. Miller, 2017-02-14 The Fifth Edition of Scott A. Miller's classic *Developmental Research Methods* presents an overview of methods to prepare students to carry out report on and evaluate research on human development across the lifespan. The book explores every step in the research process from the initial concept to the final written product, covering conceptual issues of experimental design as well as the procedural skills necessary to translate design into research. Incorporating new topics, pedagogy, and references, this edition conveys an appreciation of the issues that must be addressed, the decisions that must be made, and the obstacles that must be overcome at every phase in a research project, capturing both the excitement and the challenge of doing quality research on topics that matter.

Review of Current DHHS, DOE, and EPA Research Related to Toxicology, 1988. Multidisciplinary Methods in Educational Technology Research and Development Justus J. Randolph, 2008. Over the past thirty years there has been much dialogue and debate about the conduct of educational technology research and development. In this brief volume, the author helps clarify that dialogue by theoretically and empirically charting the research methods used in the field and provides much practical information on how to conduct educational technology research. Within this text, readers can expect to find answers to the following questions:

- a What are the methodological factors that need to be taken into consideration when designing and conducting educational technology research?
- b What types of research questions do educational technology researchers tend to ask?
- c How do educational technology researchers tend to conduct research?
- d What approaches do they use? What variables do they examine? What types of measures do they use? How do they report their research?
- e How can the state of educational technology research be improved?

In addition to answering the questions above, the author, a research methodologist, provides practical information on how to conduct educational technology research from formulating research questions to collecting and analyzing data to writing up the research reports in each of the major quantitative and qualitative traditions. Unlike other books of this kind, the author addresses some of the research approaches used less commonly in educational technology research but which nonetheless have much potential for creating new insights about educational phenomena: approaches such as single participant research, quantitative content analysis, ethnography, narrative research, phenomenology, and others.

Multidisciplinary Methods in Educational Technology Research and Development is an excellent text for educational technology research methods courses, a useful guide for those conducting or supervising research, and a rich source of empirical information on the art and science of educational technology research.
