Bone and Connective Tissue Markers Bozzano G Luisa, 2012-12-02 For many years biochemical tests have been widely used for the diagnosis classification and monitoring of bone and connective tissue disease However shortcomings in terms of the specificity and sensitivity of such tests have prompted continual questioning about their clinical usefulness This book based on a meeting organized jointly by the University of Uppsala and Pharmacia Diagnostics AB reviews our current understanding of basic bone and connective tissue biochemistry and the clinical role of biochemical markers specific to related diseases with special reference to rheumatoid arthritis and osteoporosis

MicroRNA Methods John J. Rossi, 2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease
