Target Organ Toxicity, Volume I Cohen, 2020-01-29 This two volume set provides essential information on the general principles of target organ toxicity Pharmacokinetics metabolic activation and key defense mechanisms excretion species variation and tissue specific biochemistry are explored comprehensively These general principles are then illustrated using specific examples of toxicity to different target organs and systems DNA modification and repair in tumor induction and specificity in tumor initiation are also examined Of primary interest to toxicologist pharmacologists biochemists and environmental toxicologists In Vitro Toxicology, Second Edition Shayne C.

Gad, 2000-11-02 Toxicology has made tremendous strides in the sophistication of the models used to identify and understand the mechanisms of agents that can harm or kill human and other higher organisms Non animals or in vitro models started to

gain significant use in the 1960s As a result of the increased concern over animal welfare economic factors and the need for greater sensitivity and understanding of mechanisms interest in in vitro models has risen This volume demonstrates that there now exists a broad range of in vitro models for use in either identifying or understanding most forms of toxicity The availability of in vitro models spans both the full range of endpoints irritation sensitization lethality mutagenicity and developmental toxicity and the full spectrum of target organ systems skin eye heart liver kidney nervous system etc Chapters are devoted to each of these speciality areas from a perspective of presenting the principal models and their uses and limitations Chapters that overview the principles involved in the general selection and use of models and that address the issues of safety concerns and regulatory acceptance of these methods are also included *Enzyme Kinetics and Mechanisms, Part E, Energetics of Enzyme Catalysis* ,1999-09-06 This volume supplements Volumes 63 64 87 and 249 of Methods in Enzymology These volumes provide a basic source for the quantitative interpretation of enzyme rate data and the analysis of enzyme catalysis Among the major topics covered are Energetic Coupling in Enzymatic Reactions Intermediates and Complexes in Catalysis Detection and Properties of Low Barrier Hydrogen Bonds Transition State Determination and Inhibitors The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences
