The Reoviridae Wolfgang K. Joklik, 2013-11-21 It is now just 20 years since Gomatos and his co workers at the Rockefeller University showed that the nucleic acid in reovirus particles is double stranded RNA dsRNA This discovery created great excitement for dsRNA was at that time under intense investigation as the replicative form of viral genomes consisting of single stranded RNA An equally interesting and important finding followed soon after it was found that the reovirus genome consists not of a single nucleic acid molecule but of 10 discrete segments each with its specific sequence content and each transcribed into its own messenger RNA It is clear now that these segments are genes Not surprisingly the availability of a viral genome 10 unlinked genes has permitted some unique lines of investigation in molecular biology Mammalian and avian reoviruses proved to be but the first of several viruses recognized as sharing Similarity in size and morphology and genomes consisting of 10 or 12 separate genes These viruses are distributed throughout living organisms among the natural hosts of members of this virus family are vertebrates Insects and plants Members of the Reoviridae family differ widely in the virulence that they exhibit toward their hosts For example the first discovered mammalian reovirus literally is as the name signifies a respiratory enteric orphan virus that is a virus unassociated with disease

Bacterial Pathogenesis, Part C: Identification, Regulation and Function of Virulence Factors, 2002-12-05 The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Key Features Presents alternatives to mammalian model systems Discusses virulence and essential gene identification Defines global gene expression
