Methods In Mammalian Embryology:

Methods in Mammalian Embryology Joseph C. Daniel, 1971 **Methods in Mammalian Reproduction** Joseph C. Jr. Daniel, 2012-12-02

Methods in Mammalian Reproduction presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos. Mammalian reproduction involves an intimate relationship between mother and embryo. The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship. With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic. It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage. Chapters 11-15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young. The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans. Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis. This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction.

The Mammalian Preimplantation Embryo Barry D. Bavister, 2012-12-06

With a few notable exceptions mammalian preimplantation embryos grown in vitro are likely to exhibit sub optimal or retarded development. This may be manifested in different ways depending on the species and on the stage s of embryonic development that are being examined. For example bovine embryos often experience difficulty in cleaving under in vitro conditions and usually cease development at about the 8 cell stage. Wright and Bondioli 1981. The block to development is stage dependent. Embryos cultured for 24 hr from the 1 cell stage are much more capable of developing into viable blastocysts after transfer to oviducts than embryos cultured for 24 hr from the 4 cell stage prior to transfer. Eyestone et al 1985. Similar problems with in vitro embryo development are encountered in other species. Pig embryos can be grown up to the 4 cell stage in vitro but usually no further. Davis and Day 1978. In the golden hamster in the rat and in many outbred strains of mice development of zygotes in vitro is blocked at the 2 cell stage. Yanagimachi and Chang 1964. Whittingham 1975. Even with some inbred mouse strains embryo development is reduced if very early cleavage stages are used as the starting point for in vitro culture. Spielmann et al 1980. A common finding is that embryos grown in vitro have reduced cell counts. Harlow and Quinn 1982. Kane 1985 and their viability is reduced. Bowman and McLaren 1970. Papaioannou and Ebert 1986 compared to equivalent developmental stages recovered from mated animals.

(Ed),1971 The Mammalian Fetus in vitro C. R. Austin,2013-12-14 **Manipulation of Mammalian Development** Ralph B.L. Gwatkin,2013-11-11 Developmental biology has been transformed recently by discoveries in the fields of molecular biology cell biology and immunology New ways of manipulating mammalian development are uncovering control mechanisms and enabling us to apply them in solving practical problems in animal production and human health This book outlines some of these new manipulations and how they have contributed to the present state of developmental biology Chapter 1 describes gene transfer by micro injection of cloned recombinant DNA into zygotes Although the factors that affect transformation frequencies and integration sites are still unknown such techniques offer a number of exciting prospects Research models for human disease could be artificially created and desirable characteristics in agricultural animals could be enhanced The theme of cell to cell transfer is continued in Chapters 2 and 3 Chapter 2 describes pronuclear transplantation by Sendai virus induced fusion of the karyoplast with the enucleated embryo Using this procedure it has been demonstrated that both male and female genomes are essential for normal development although the reason for this is not yet understood Chapter 3 describes studies on the fusion of whole oocytes **A Comparative Overview of Mammalian Fertilization** Bonnie S. Dunbar,M.G. O'Rand,2013-06-29 In 1964 the Fertilization and Gamete Physiology Research Training Program FERGAP was established at the Marine Biological Laboratories Woods Hole Massachusetts Over the course of the next 12 years under the directorship of Dr Charles B Metz FERGAP brought together trained and inspired a generation of students in reproductive biology from all over the world As students of C B Metz and as FERGAP trainees we would like to dedicate this collected work on comparative mammalian fertilization to our teacher and mentor Dr Charles B Metz Like a number of authors contributing to this volume we have been struck by the significant impact that C B Metz and FERGAP had on the development of students of reproductive biology Applying both the classical and molecular techniques of cell biology and immunology to problems of gamete biology Dr Metz emphasized a comparative and analytical approach that was reflected in his own research on fertilization in Paramecia sea urchins frogs and mammals It is hoped that this volume will serve to stimulate students to discover the myriad of fascinating research problems in gamete and reproductive biology Bonnie S Dunbar Michael G O Rand Houston Texas Chapel Hill North Carolina ix Contents Part I COMPARATIVE OVERVIEW OF MAMMALIAN GAMETES The Coevolution of Mammalian Gametes 3 J Michael Bedford I Introduction 3 2 Gamete Design 4 2 1 Monotremes 5 2 2 Marsupials 5 2 3 Eutherians 9 3 Gamete Maturation 14 3 1 Oocyte Maturation 14 3 2 Sperm Maturation in the Male 15 *Bibliography of Agriculture* ,1971-12 **The Early Development of Mammals** British Society for Developmental Biology,1975-08-21 **Advances in Statistical Methods for Genetic Improvement of Livestock** Daniel Gianola,Keith Hammond,2012-12-06 Developments in statistics and computing as well as their application to genetic improvement of livestock gained momentum over the last 20 years This text reviews and consolidates the statistical foundations of animal breeding This text will prove useful as a reference source to animal breeders quantitative geneticists
