Methods In Neurosciences Receptors Model Systems And Specific Receptors Volume 11:

Receptors P. Michael Conn, 2013-10-22 *Methods in Neurosciences Volume 11 Receptors Model Systems and Specific Receptors* is a compilation of papers that describes techniques and information that are important to the neurosciences. This volume discusses preferred receptor techniques, molecular techniques, and methods to determine receptor subclasses and localization in the ligand design. The first paper discusses the steroid receptor found in the central nervous system for steroid hormones that affects strongly the structure and function of both developed and immature nervous systems. Another paper describes how a glycoprotein of 79.5 kDa transferrin carries iron in the blood stream for delivery to different tissues after the transferrin has bound with a specific receptor on the surface of the cell. This book also explains the binding sites of pituitary adenylate cyclase activating polypeptide in the human brain while one paper analyzes the neurotensin receptors during the primary culture of neurons. This volume then also analyzes the structure and function of the fast nerve growth factor receptor, particularly how a signal on the outside of a cell is transmitted to the cell's interior. This collection is helpful for microbiologists, cellular researchers, students, and professors in the discipline of neurosciences. *Receptor Molecular Biology*, 1995-03-22 The volumes in this series include contemporary techniques significant to a particular branch of neuroscience. They are an invaluable aid to the student as well as the experienced researcher, not only in developing protocols in neuroscience but in disciplines where research is becoming closely related to neuroscience. Each volume of *Methods in Neurosciences* contains an index and each chapter includes references. Dr. Conn became Editor in Chief of the series beginning with Volume 15, so each subsequent volume could be guest edited by an expert in that specific field. This further strengthens the depth of coverage in *Methods in Neurosciences* for students and researchers alike. Cloning, Expression systems, Signal transduction, Structure function techniques, Antireceptor antibodies, Regulation, 3D receptor modeling and computational probing. *Neurobiology of Cytokines* Errol B. De Souza, 2013-10-22 *Neurobiology of Cytokines Part A* provides an overview of the effects of cytokines in the brain and in the endocrine system. The book discusses the general aspects of cytokines, including the endogenous agonists and antagonists, their receptors, their second messengers, and transport mechanisms for cytokines across the blood-brain barrier. The text also describes the anatomical localization of cytokines, cytokine receptors, and their respective mRNA in brain and in endocrine tissues. The methods for evaluating the in vivo as well as in vitro actions of cytokines on hormone secretion are also considered. The book further tackles the synthesis and release of cytokines and their central nervous system actions and the methodology for studying the role of cytokines in human neuropathological conditions. Photoreceptor Cells Paul A. Hargrave, 2013-10-22 *Photoreceptor Cells Volume 15* covers the advances in the study of photoreceptor cells. The book discusses biochemical, cell and structural, biological, and molecular biological techniques needed for the study of photoreceptor cells. The text also describes the methods for observing the structure of photoreceptor cells and for studying their metabolism. The procedures for photoreceptor cell isolation are

also considered The book further tackles the preparation of proteins involved in rod cell metabolism with particular emphasis on proteins of the visual transduction cascade The text also encompasses the application of molecular biological techniques for the examination of molecular components of the visual system and their structure distribution and function Neuroscientists ophthalmologists biochemists and people involved in the study of photoreceptor cells will find the book invaluable
