Methods in Non-Aqueous Enzymology Munishwar N. Gupta, 2013-12-01 Extending the range of enzymatic catalysis by using non aqueous media has now developed into a powerful approach in biochemistry and biotechnology One peculiar feature which distinguishes it from the conventional enzymology carried out in aqueous buffers is that the awareness of different parameters that control and influence the behaviour of enzymes in such environments has emerged rather slowly Science is about being able to repeat what somebody else has done Absence of knowledge about such well defined parameters factors has sometimes made some workers rather cautious and diffident about using this approach in their laboratories But for this non aqueous enzymology would be more widely practised It is these thoughts that made me feel that the availability of some well defined protocols for various applications involving enzymes in non aqueous environments would further catalyze the growth of this area Hence this book in which each chapter has some protocols in a specific area The protocols are preceded by brief background material The early chapters which are of general importance concern control of water activity and stabilization via immobilization Some subsequent chapters provide the protocols for transformations involving lipids and carbohydrates peptide synthesis and preparation of chiral compounds The disproportionate focus on lipases is not a coincidence this class of enzymes has been used more often than others in non aqueous enzymology Techniques in Molecular Systematics and Evolution Rob DeSalle, Gonzalo Giribet, Ward

Wheeler, 2002-04-01 The amount of information that can be obtained by using molecular techniques in evolution systematics and ecology has increased exponentially over the last ten years The need for more rapid and efficient methods of data acquisition and analysis is growing accordingly This manual presents some of the most important techniques for data acquisition developed over the last years The choice and justification of data analysis techniques is also an important and critical aspect of modern phylogenetic and evolutionary analysis and so a considerable part of this volume addresses this important subject The book is mainly written for students and researchers from evolutionary biology in search for methods to acquire data but also from molecular biology who might be looking for information on how data are analyzed in an evolutionary context To aid the user information on web located sites is included wherever possible Approaches that will push the amount of information which systematics will gather in the *Structure and Intrinsic Disorder in Enzymology* Munishwar Nath Gupta, Vladimir N.
