Neurocytochemical Methods Andre Calas, Daniel Eugene, 2013-06-29 The great strides made in the field of morphological methods during the past decades have perhaps found their most spectacular expression in the functional exploration of the nervous system In comparison with other tissues nerve tissue displays three kinds of specificity structural because of the unique organization of the neuronal networks chemical as shown for example by the informative molecules exchanged between the nerve cells and of course functional thanks to the particular metabolic and electrophysiological characteristics of the neurons Although for a long time the structural properties of the nervous system were generally considered to constitute the only field to which morphological techniques could be applied we are to day justified in believing that they can also explore the nerve tissue through its specific chemical and functional aspects thanks to the development of immunocytochemistry and in situ hybridization to the elaboration of the deoxyglucose method to the use of voltage or ion sensitive dyes and to the progress made in the application of in vivo techniques like PET These methods have evolved so fast the technical and fundamental problems they raise are so numerous and stimulating and the importance of the complementary data they provide is so obvious that we thought it was a good time to organize a new meeting between distinguished specialists in the neurocytochemical field **Methods in Cell Biology** American Society For Cell
