Methuselah Flies A Case Study In The Evolution Of Aging:

Methuselah Flies: A Case Study In The Evolution Of Aging Michael Robertson Rose, Hardip B Passananti, Margarida Matos, 2004-06-14 *Methuselah Flies* presents a trailblazing project on the biology of aging. It describes research on the first organisms to have their lifespan increased and their aging slowed by hereditary manipulation. These organisms are fruit flies from the species *Drosophila melanogaster*, the great workhorse of genetics. Michael Rose and his colleagues have been able to double the lifespan of these insects and improved their health in numerous respects as well. The study of these flies with postponed aging is one of the best means we have of understanding and ultimately achieving the postponement of aging in humans. As such, the carefully presented detail of this book will be of value to research devoted to the understanding and control of aging. *Methuselah Flies* is a tightly edited distillation of twenty years of work by many scientists. It contains the original publications regarding the longer lived fruit flies, offers commentaries on each of the topics covered, new short essays that put the individual research papers in a wider context, gives full access to the original data, captures the scientific significance of postponed aging for a wide academic audience. **Experimental Evolution** Theodore Garland, Michael R. Rose, 2009-12-03 This volume summarizes studies in experimental evolution, outlining current techniques and applications and presenting the field's range of research. *The Future of Aging*, 2010-07-28 Just as the health costs of aging threaten to bankrupt developed countries, this book makes the scientific case that a biological bailout could be on the way and that human aging can be different in the future than it is today. Here 40 authors argue how our improving understanding of the biology of aging and selected technologies should enable the successful use of many different and complementary methods for ameliorating aging and why such interventions are appropriate based on our current historical, anthropological, philosophical, ethical, evolutionary, and biological context. Challenging concepts are presented together with in-depth reviews and paradigm-breaking proposals that collectively illustrate the potential for changing aging as never before. The proposals extend from today to a future many decades from now in which the control of aging may become effectively complete. Examples include sirtuin modulating pills, new concepts for attacking cardiovascular disease and cancer, mitochondrial rejuvenation, stem cell therapies, and regeneration, tissue reconstruction, telomere maintenance, prevention of immunosenescence, extracellular rejuvenation, artificial DNA repair, and full deployment of nanotechnology. *The Future of Aging* will make you think about aging differently and is a challenge to all of us to open our eyes to the future therapeutic potential of biogerontology. *Aging is a Group-Selected Adaptation* Joshua Mitteldorf, 2017-02-03 Although books exist on the evolution of aging, this is the first book written from the perspective of aging as an adaptive program. It offers an insight into the implications of research on aging genetics. The author proposes the Demographic Theory of Senescence, whereby aging has been affirmatively selected because it levels the death rate over time, helping stabilize population dynamics and prevent extinctions. **Does Aging Stop?** Laurence D. Mueller, Casandra L. Rauser, Michael R. Rose, 2011-07-29 Does Aging

Stop reveals the most paradoxical finding of recent aging research the cessation of demographic aging The authors show that aging stops at the level of the individual organism and explain why evolution allows this The implications of this counter intuitive conclusion are profound and aging research now needs to accept three uncomfortable truths First aging is not a cumulative physiological process Second the fundamental theory that is required to explain manipulate and probe the phenomena of aging comes from evolutionary biology Third strong inference experimental strategies for aging must be founded in evolutionary research not cell or molecular biology The result of fifteen years of research bringing together new applications of evolutionary theory new models for demography and massive experimentation Does Aging Stop advances an entirely new foundation for the scientific study of aging Conceptual Breakthroughs in The Evolutionary Biology of Aging

Kenneth R. Arnold, Michael R. Rose, 2023-07-10 Conceptual Breakthroughs in the Evolutionary Biology of Aging continues the innovative Conceptual Breakthroughs series by providing a comprehensive outline of the major breakthroughs that built the evolutionary biology of aging as a leading scientific field Following the evolutionary study of aging from its humble origins to the present the book's chapters treat the field's breakthroughs one at a time Users will find a concise and accessible analysis of the science of aging viewed through an evolutionary lens Building upon widely cited studies conducted by author Michael Rose this book covers 30 subsequent years of growth and development within the field The book highlights key publications for those who are not experts in the field providing an important resource for researchers Given the prevailing interest in changing the aging process dramatically it is a powerful tool for readers who have a vested interest in understanding its causes and future control measures Reviews cell molecular theories of aging in the light of evolutionary biology Offers an evolutionary analysis of prospects for mitigating aging not commonly discussed within private and public sectors Provides readers with a radically different perspective on contemporary biological gerontology specifically through the lens of evolutionary biology **Longevity and Frailty** Fondation IPSEN pour la recherche thérapeutique, 2005-04-26

Understanding the relationship between frailty and longevity becomes increasingly important as the world continues to age and life expectancy in most countries continues to increase The articles contained in this book are the outcome of a colloquium sponsored by Fondation IPSEN in which interdisciplinary perspectives were brought to bear on conceptual empirical and clinical aspects of this relationship The result is a unique innovative and timely blend of papers on topics ranging from frailty concepts in animal models and early Homo sapiens to documentation of progress in morbidity compression on the relationships between frailty and impairments and inflammation and perspectives on long term health care needs in an aging world The Long Tomorrow Michael R. Rose, 2005-09-15

Equally important Rose surveys the entire field offering colorful portraits of many leading scientists and shedding light on research findings from around the world We learn that rodents given fifteen to forty percent fewer calories live about that much longer and that volunteers in Biosphere II who lived on reduced caloric intake for two years all had improved vital signs Perhaps most interesting we discover that

aging hits a plateau and stops at least it does so in fruit flies Jacket A Voice in the Wilderness Professor Joseph L. Graves Jr., 2022-09-13 Why understanding evolution the most reviled branch of science can help us all from fighting pandemics to undoing racism Evolutionary science has long been regarded as conservative a tool for enforcing regressive ideas particularly about race and gender But in A Voice in the Wilderness evolutionary biologist Joseph L. Graves Jr once styled as the Black Darwin argues that his field is essential to social justice He shows for example why biological races do not exist He dismantles recent work in human biodiversity seeking genes to explain the achievements of different ethnic groups He decimates homophobia sexism and classism as well As a pioneering Black biologist a leftist and a Christian Graves uses his personal story his journey from a child of Jim Crow to a major researcher and leader of his peers to rewrite his field A Voice in the Wilderness is a powerful work of scientific anti racism and a moving account of a trailblazing life The Transhumanist Reader Max More, Natasha Vita-More, 2013-03-05 The first authoritative and comprehensive survey of the origins and current state of transhumanist thinking The rapid pace of emerging technologies is playing an increasingly important role in overcoming fundamental human limitations Featuring core writings by seminal thinkers in the speculative possibilities of the posthuman condition essays address key philosophical arguments for and against human enhancement explore the inevitability of life extension and consider possible solutions to the growing issues of social and ethical implications and concerns Edited by the internationally acclaimed founders of the philosophy and social movement of transhumanism The Transhumanist Reader is an indispensable guide to our current state of knowledge of the quest to expand the frontiers of human nature **The Evolution of Senescence in the Tree of Life** Richard P. Shefferson, Owen R. Jones, Roberto Salguero-Gómez, 2017-02-23 The existing theories on the evolution of senescence assume that senescence is inevitable in all organisms However recent studies have shown that this is not necessarily true A better understanding of senescence and its underlying mechanisms could have far reaching consequences for conservation and eco evolutionary research This book is the first to offer interdisciplinary perspectives on the evolution of senescence in many species setting the stage for further developments It brings together new insights from a wide range of scientific fields and cutting edge research done on a multitude of different animals including humans plants and microbes giving the reader a complete overview of recent developments and of the controversies currently surrounding the topic Written by specialists from a variety of disciplines this book is a valuable source of information for students and researchers interested in ageing and life history traits and populations Physiological Basis of Aging and Geriatrics Paola S. Timiras, 2007-08-16 Extensively revised and updated to reflect the current state of knowledge in the study of aging this Fourth Edition offers a complete profile of the aging process at all levels from molecules and cells to demography and evolution Written by international experts in current basic and clinical aging research this text includes aspects of individual comparative and differential aging and discussions of theories and mechanisms of aging This invaluable reference illustrates how bodily systems organs and functions are affected

with aging describes how genetic and environmental factors influence age related changes and addresses some of the clinical consequences of these changes for health and longevity Well illustrated with numerous tables and graphs this book presents up to date information from internationally renowned experts in various bio medical fields Race and the Genetic

Revolution Sheldon Krinsky, Kathleen Sloan, 2011 A project of the Council for Responsible Genetics **On Human Nature** Michel Tibayrenc, Francisco J. Ayala, 2016-09-12 On Human Nature Biology Psychology Ethics Politics and Religion covers the present state of knowledge on human diversity and its adaptive significance through a broad and eclectic selection of representative chapters This transdisciplinary work brings together specialists from various fields who rarely interact including geneticists evolutionists physicians ethologists psychoanalysts anthropologists sociologists theologians historians linguists and philosophers Genomic diversity is covered in several chapters dealing with biology including the differences in men and apes and the genetic diversity of mankind Top specialists known for their open mind and broad knowledge have been carefully selected to cover each topic The book is therefore at the crossroads between biology and human sciences going beyond classical science in the Popperian sense The book is accessible not only to specialists but also to students professors and the educated public Glossaries of specialized terms and general public references help nonspecialists understand complex notions with contributions avoiding technical jargon Provides greater understanding of diversity and population structure and history with crucial foundational knowledge needed to conduct research in a variety of fields such as genetics and disease Includes three robust sections on biological psychological and ethical aspects with cross fertilization and reciprocal references between the three sections Contains contributions by leading experts in their respective fields working under the guidance of internationally recognized and highly respected editors *The Long Life* Helen

Small, 2010-09-16 The Long Life invites the reader to range widely from the writings of Plato through to recent philosophical work by Derek Parfit Bernard Williams and others and from Shakespeare's King Lear through works by Thomas Mann Balzac Dickens Beckett Stevie Smith Philip Larkin to more recent writing by Saul Bellow Philip Roth and J M Coetzee Helen Small argues that if we want to understand old age we have to think more fundamentally about what it means to be a person to have a life to have or lead a good life to be part of a just society What did Plato mean when he suggested that old age was the best place from which to practice philosophy or Thomas Mann when he defined old age as the best time to be a writer and were they right If we think as Aristotle did that a good life requires the active pursuit of virtue how will our view of later life be affected If we think that lives and persons are unified much as stories are said to be unified how will our thinking about old age differ from that of someone who thinks that lives and or persons can be strongly discontinuous In a just society what constitutes a fair distribution of limited resources between the young and the old How if at all should recent developments in the theory of evolutionary senescence alter our thinking about what it means to grow old This is a groundbreaking book deep as well as broad and likely to alter the way in which we talk about one of the great social concerns of our time the growing

numbers of those living to be old and the growing proportion of the old to the young , *The Transhumanism Handbook* Newton Lee,2019-07-03 Modern humanity with some 5 000 years of recorded history has been experiencing growing pains with no end in sight It is high time for humanity to grow up and to transcend itself by embracing transhumanism Transhumanism offers the most inclusive ideology for all ethnicities and races the religious and the atheists conservatives and liberals the young and the old regardless of socioeconomic status gender identity or any other individual qualities This book expounds on contemporary views and practical advice from more than 70 transhumanists Astronaut Neil Armstrong said on the Apollo 11 moon landing in 1969 One small step for a man one giant leap for mankind Transhumanism is the next logical step in the evolution of humankind and it is the existential solution to the long term survival of the human race

The Biology of Human Longevity Caleb E. Finch,2010-07-28 Written by Caleb Finch one of the leading scientists of our time The Biology of Human Longevity Inflammation Nutrition and Aging in the Evolution of Lifespans synthesizes several decades of top research on the topic of human aging and longevity particularly on the recent theories of inflammation and its effects on human health The book expands a number of existing major theories including the Barker theory of fetal origins of adult disease to consider the role of inflammation and Harmon s free radical theory of aging to include inflammatory damage Future increases in lifespan are challenged by the obesity epidemic and spreading global infections which may reverse the gains made in lowering inflammatory exposure This timely and topical book will be of interest to anyone studying aging from any scientific angle Author Caleb Finch is a highly influential and respected scientist ranked in the top half of the 1% most cited scientists Provides a novel synthesis of existing ideas about the biology of longevity and aging Incorporates important research findings from several disciplines including Gerontology Genomics Neuroscience Immunology Nutrition **Finding the Fountain of Youth** Aharon W. Zorea,2017-04-26 Separating truth from hype this book introduces readers to the topic of life extension in a holistic manner that provides scientific historical and cultural perspectives While the story of 16th century explorer Juan Ponce de Le n futilely searching for the Fountain of Youth is likely a myth it is true that for many centuries mankind has sought a cure for aging Today the anti aging and longevity industry is a multibillion dollar industry and medical advances are continuing to find ways to add to our time on earth Finding the Fountain of Youth The Science and Controversy behind Extending Life and Cheating Death introduces readers to the topic of life extension in a holistic manner examining the topic through scientific historical and cultural perspectives It also highlights key medical and ethical controversies related to this particular area of gerontology and serves as a gateway for further research and study The book s chapters address the history of movements to remain youthful from ancient times through the modern era past medical advances that significantly extended the average lifespan and our cultural obsession with staying young that has spawned the anti aging industry Readers will learn about basic principles of aging and anti aging as well as the science behind the methods both proven and hypothetical that serve to extend the lifespan The final section of the book examines controversial issues and debates related

to life extension such as global overpopulation length of life versus quality of life and socioeconomic concerns **Fly** Steven Connor, 2006-12-15 Few creatures are as universally despised as flies Blamed for pestilence and plagues they were publicly excommunicated from the medieval church Beelzebub the lord of the flies was said to be the embodiment of evil and for centuries flies were considered the result of spontaneous generation the unnatural consequence of rotting meat Fly explores the history of this much maligned creature and then turns to examine its newfound redemption through science The secrets of the fly's versatile powers of flight Steven Connor reveals are only beginning to be understood and appreciated Its eyes and wings for instance have evolved so perfectly that they provide inspiration for some of today's most daring technological and scientific innovations And the humble fruit fly Connor demonstrates stands at the center of revolutionary advances in genetic research Connor delights in tracking his lowly subject through myth literature poetry painting film and biology Humans live in close and intimate quarters with flies but Fly is the first book to give these common creatures their due
