processes to target the existing problems The question is addressed by following a research methodology of design sciences Amongst others it includes a detailed analysis of the research problem a definition of the objective the design and development of solutions and an evaluation of the developed concepts In summary the thesis presents innovative concepts to support modellers and provides a step towards end user enablement in process modelling

### **Real-Time Massive Model**

**Rendering** Sung-eui Yoon, Enrico Gobbetti, David Kasik, Dinesh Manocha, 2022-06-01 Interactive display and visualization of large geometric and textured models is becoming a fundamental capability There are numerous application areas including games movies CAD virtual prototyping and scientific visualization One of observations about geometric models used in interactive applications is that their model complexity continues to increase because of fundamental advances in 3D modeling simulation and data capture technologies As computing power increases users take advantage of the algorithmic advances and generate even more complex models and data sets Therefore there are many cases where we are required to visualize massive models that consist of hundreds of millions of triangles and even billions of triangles However interactive visualization and handling of such massive models still remains a challenge in computer graphics and visualization In this monograph we discuss various techniques that enable interactive visualization of massive models These techniques include visibility computation simplification levels of detail and cache coherent data management We believe that the combinations of these techniques can make it possible to interactively visualize massive models in commodity hardware Table of Contents Introduction Visibility Simplification and Levels of Detail Alternative Representations Cache Coherent Data Management Conclusions Bibliography
