**Hydrocarbons** Huizhong Shen,2016-03-26 This thesis presents a comprehensive analysis of the global health impacts of polycyclic aromatic hydrocarbons PAHs in ambient air conducted on the basis of a high resolution emission inventory global chemical transport modeling and probabilistic risk assessment One of the main strengths of the thesis is the concentration downscaling process which provides a linkage between emissions and exposure concentrations at a comparatively high resolution Moreover by focusing on individual susceptibility the thesis proposes an instrumental revision of current risk assessment methodology and argues that if individual susceptibility were not taken into consideration the overall risk would be underestimated by 55% and the proportion of highly vulnerable populations would be underestimated by more than 90%

Mustafizur Rahman,Khandakar R. Islam,2010-10-17 This book addresses an important topic of food security in South Asia

with specific reference to climate change Of the 1 billion food insecure people in the world more than 30% are in South Asia The problem of food insecurity may be exacerbated by the projected climate change especially because of the water scarcity caused by rapid melting of the glaciers in the Himalayas and increase in variability in monsoonal rains and frequency of extreme events Furthermore large populations of Bangladesh and other coastal regions may be displaced by sea level rise Thus this volume addresses recommended land use and soil water crop vegetation management practices which would enable land managers to adapt to climate disruption by enhancing soil ecosystem social resilience In addition to biophysical factors this book also addresses the issues related to human dimensions including social ethnical and political considerations
