Fraissard, H.A. Resing, 2012-12-06 In 1976 on the occasion of the Centennial of the American Chemical Society H A RESING and C G WADE organized an international symposium on magnetic resonance in colloid and in interface science which brought together a large number of scientists from the United States and from abroad The aim of this symposium was to include all experimental inorganic organic and biochemical systems in which molecules are bound to interfaces and to show the contribution of various techniques based on magnetic resonance to the knowledge of these systems This ambitious program resulted into a very interesting gathering that initiated a more interdisciplinary approach to the problem of interfaces Because of the success of this symposium it was suggested that a similar meeting should be organized in Europe within the next three years Professor J FRAISSARD accepted this task but considering the rapid developments in the theory and in the applications of the magnetic resonance spectroscopies the organizing committee decided to arrange the meeting to be held in MENTON France in two parts the first being a School and the second the Symposium proper The former was intended to review and to teach theoretical aspects as well as to discuss the experimental results derived from these

advanced methods the Symposium was to be for the discussion of the latest results at the highest level

Surfactants in Solution K.L. Mittal, D.O. Shah, 2013-03-08 This volume chronicles the proceedings of the 8th International Symposium on Surfactants in Solution SIS held in Gainesville FL June 10 15 1990 This series of symposia have been smoothly running since 1976 but the appellation Surfactants in Solution was used for the first time in 1982 in Lund Since then our logo SIS has become very familiar to everyone involved in surfactants In Lund the meeting was billed as the Fourth International Symposium on Surfactants in Solution Earlier three events were held under different rubrics but proceedings of all these symposia except the 7th SIS held in Ottawa in 1988 have been properly documented As a matter of fact so far 10 volumes have appeared under the title Surfactants in Solution 1 2 3 The program for the 9th SIS was very comprehensive and many ramifications of surfactants were covered and it was a veritable international event It contained a total of 384 papers by 869 authors from practically every corner of our planet Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials As in the past there were plenary lectures 5 invited talks 37 oral presentations 195 and poster presentations 147 The plenary lectures were given by Prof J Th G Overbeek Prof C A Bunton Prof H Ti Tien and Dr J Swalen The lecture by Prof Overbeek the doyen of surface and colloid science was a real treat

Modern Bioelectrochemistry F. Gutmann, H. Keyzer, 2012-12-06 As stated by Buckminster Fuller in Operation Manual for Spaceship Earth Synergy is the behavior of whole systems unpredicted by separately observed behaviors of any of the system's separate parts In a similar vein one might define an intellectual synergy as an improvement in our understanding of the behavior of a system unpredicted by separately acquired viewpoints of the activities of such a system Such considerations underlie and provide a motivation for an interdisciplinary approach to the problem of unraveling the deeper mysteries of cellular metabolism and organization and have led a number of pioneering spirits many represented in the pages which follow to consider biological systems from an electrochemical standpoint is itself of course an interdisciplinary branch of Now electrochemistry science and there is no doubt that many were introduced to it via Bockris and Reddy's outstanding wide ranging and celebrated textbook Modern Electrochemistry If I am to stick my neck out and seek to define bioelectrochemistry I would take it to refer to the study of the mutual interactions of electrical fields and biological materials including living systems

Dynamic Light Scattering R. Pecora, 2013-11-11 In the twenty years since their inception modern dynamic light scattering techniques have become increasingly sophisticated and their applications have grown exceedingly diverse Applications of the techniques to problems in physics chemistry biology medicine and fluid mechanics have proliferated It is probably no longer possible for one or two authors to write a monograph to cover in depth the advances in scattering techniques and the main areas in which they have made a major impact This volume which we expect to be the first of a series presents reviews of selected specialized areas by renowned experts It makes no attempt to be comprehensive it emphasizes a body of related applications to polymeric biological and colloidal systems and to critical

phenomena The well known monographs on dynamic light scattering by Berne and Pecora and by Chu were published almost ten years ago They provided comprehensive treatments of the general principles of dynamic light scattering and gave introductions to a wide variety of applications but naturally they could not treat the new applications and advances in older ones that have arisen in the last decade The new applications include studies of interacting particles in solution Chapter 4 scaling approaches to the dynamics of polymers including polymers in semidilute solution Chapter 5 the use of both Fabry Perot interferometry and photon correlation spectroscopy to study bulk polymers Chapter 6 studies of micelles and microemulsions Chapter 8 studies of polymer gels Chapter 9

Physics of Amphiphilic Layers Jacques Meunier, Dominique Langevin, Nino Boccara, 2012-12-06 Amphiphilic layers play essential roles in the behaviour of a great variety of disperse systems such as micelles microemulsions and vesicles They can also exist as isolated mono or bilayers or constitute extended liquid crystalline structures Although the properties of these different systems may at first sight seem unrelated theoretical interpretations of them depend on several common concepts This was the reason for bringing together scientists working in this area for the International Winter School on the Physics of

Amphiphilic Layers which was held at Les Houches 10-18 February 1987. The topics treated in the proceedings volume are mono and bilayers, interactive forces between layers with special emphasis on steric forces, ordered structures in particular swollen lamellar phases and defects, vesicles, micelles including polymer like systems, microemulsions especially random bicontinuous structures and porous media. The importance of thermal fluctuations in the amphiphilic layers is stressed. Recent results are presented and literature references allow readers not familiar with the subject to find any background information they require.

Solution Behavior of Surfactants K.L. Mittal, E.J. Fendler, 2012-12-06. This and its companion Volume 2 comprise the proceedings of the International Symposium on Solution Behavior of Surfactants: Theoretical and Applied Aspects organized under the auspices of the 11th Northeast Regional Meeting of the American Chemical Society held in Potsdam, N.Y. June 30-July 3, 1980. This Symposium represented the third event in the series of symposia dealing with the topic of surfactants in solution. The first Symposium was held in Albany, N.Y. in 1976 under the title Micellization, Solubilization and Microemulsions, the proceedings of which have been documented in a two volume set. The second was held under the title Solution Chemistry of Surfactants in 1978 in Knoxville, TN and the proceedings of this event have also been properly chronicled. Apropos the fourth biennial Symposium in this series is entitled International Symposium on Surfactants in Solution. K.L. Mittal and B. Lindman, Cochairmen, and is scheduled to be held from June 27 to July 2, 1982 in Lund, Sweden. Since these biennial events have been very successful and important in bringing researchers with varied interests together and in stimulating interdisciplinary communication, so the plans are to continue these on a regular basis with a change in venue for each meeting.

Giant Micelles Raoul Zana, Eric W. Kaler, 2007-05-30. The co-evolution of a strong theoretical framework alongside application of a range of sophisticated experimental tools engendered rapid advancement in the study of giant micelles. Beginning with Anacker and Debye's 1951 experimental study of elongated micelles by light scattering and their subsequent theoretical inference that the thermodynamic
