A Semiempirical Life Michael James Steuart Dewar, 1992 This volume is an autobiography of Michael Dewar eminent developer of the semi empirical method of theoretical computational chemistry The personality and charm of this bold brilliant and frequently brash scientist is vividly demonstrated in his stories ranging from his early discovery of the structure of colchicine by analysis of literature data to his application of theoretical chemistry to numerous questions of chemical structure and reactivity Dewar describes his childhood in India his studies in Oxford in the 1940 s and his subsequent Professorships in England and at the University of Chicago and the University of Texas

A Life and Career in Chemistry Pierre Laszlo, 2021-09-13 This book is an enthusiastic account of Pierre Laszlo s life and pioneering work on catalysis of organic reactions by modified clays and his reflections on doing science from the 1960s to 1990s In this autobiography readers will discover a first hand testimony of the chemical revolution in the second half of the 20th century and the author s perspective on finding a calling in science and chemistry as well as his own experience on doing science teaching science and managing a scientific career During this period Pierre Laszlo led an academic laboratory and worked also in three different countries the US Belgium and France where he had the opportunity to meet remarkable colleagues In this book he recalls his encounters and collaborations with important scientists who shaped the nature of chemistry at times of increased pace of change and collates a portrait of the worldwide scientific community at that time In addition the author tells us about the turns and twists of his own life and how he ended up focusing his research on clay based chemistry where clay minerals were turned in his lab to catalysis of key chemical transformations Given its breath the book offers a genuine information on the life and career of a chemist and it will appeal not only to scientists and students but also to historians of science and to the general reader

Perspectives on Chemical Biography in the 21st Century Isabel Malaquias, Peter J. T. Morris, 2019-01-14 Overlooked even despised by historians of chemistry for many years the genre of biography has enjoyed a revival since the beginning of this century The key to its renaissance is the use of the biographical form to provide a contextual analysis of important themes in contrast to the uncritical almost hagiographic lives of chemists written in the earlier part of the twentieth century Bringing together the contributions of scholars active in several different countries *Perspectives on Chemical Biography in the 21st Century* leads the reader through emerging questions around sources and the generic problems faced by authors of biographies before moving on to discuss aspects more related with physical theoretical and inorganic chemistry and facets of 19th century chemistry In contrast to the letters and diaries of earlier chemists we are now faced with scientists who communicate by telephone and email and compose their documents on computers Are we facing a modern equivalent of the destruction of the Library of Alexandria where all our sources are wiped out electronically

Biographies of Scientists Roger Smith, 1998 Identifies over 500 sources of information about the lives of scientists for young and adult general readers and for scholars Entries ranging from a quarter to a half page in length

Computational Chemistry Errol G. Lewars, 2024-06-04 This is the fourth edition of the successful textbook on computational chemistry which continues to provide a comprehensive introduction to the theory and practice of computational chemistry Notable updates include a review of references up to mid 2023 encompassing recent developments in scientific journals books and software The evolving prominence of density functional theory DFT is emphasized and attention is given to the increasing application of artificial intelligence in computational chemistry The book maintains key features from the previous edition delving into the mathematical intricacies of ab initio and density functional methods at an introductory level Clear explanations of matrix methods are provided offering a direct approach to obtaining energy levels and molecular orbitals Additionally each chapter includes sets of Easier and Harder drill questions with suggested answers at the end of the book enhancing the learning experience The book is intended for upper year undergraduate and graduate students studying computational and theoretical chemistry and for self study by researchers in universities and industry to whom computational chemistry may be useful *Computational Chemistry* Errol Lewars, 2003-03-31 Computational chemistry has become extremely important in the last decade being widely used in academic and industrial research Yet there have been few books designed to teach the subject to nonspecialists *Computational Chemistry Introduction to the Theory and Applications of Molecular and Quantum Mechanics* is an invaluable tool for teaching and researchers alike The book provides an overview of the field explains the basic underlying theory at a meaningful level that is not beyond beginners and it gives numerous comparisons of different methods with one another and with experiment The following concepts are illustrated and their possibilities and limitations are given potential energy surfaces simple and extended H ckel methods ab

initio AM1 and related semiempirical methods density functional theory DFT Topics are placed in a historical context adding interest to them and removing much of their apparently arbitrary aspect The large number of references to all significant topics mentioned should make this book useful not only to undergraduates but also to graduate students and academic and industrial researchers *Biographical Memoirs* National Academy of Sciences,1999-11-29 Biographic Memoirs Volume 77 contains the biographies of deceased members of the National Academy of Sciences and bibliographies of their published works Each biographical essay was written by a member of the Academy familiar with the professional career of the deceased For historical and bibliographical purposes these volumes are worth returning to time and again **My 132**

Enjoying Organic Chemistry, 1927-1987 Egbert Havinga,1991 The selection criteria were numerous Each individual had to have made seminal contributions to organic chemistry over a multidecade career The average age of the authors is over 70 Profiles would represent scientists born and professionally productive in different countries Chemistry in 13 countries is detailed Taken together these individuals were to have conducted research in nearly all sub specialties of organic chemistry Invitations to contribute were based on solicited advice and on recommendations of chemists from five continents including nearly all of the contributors The final assemblage was selected entirely and exclusively by me Not all who were invited chose to participate and not all who should have been invited could be asked A very detailed four page document was sent to

the contributors in which they were informed that the objectives of the series were 1 to delineate the overall scientific development of organic chemistry during the past 30 40 years a period during which this field has dramatically changed and matured 2 to describe the development of specific areas of organic chemistry to highlight the crucial discoveries and to examine the impact they have had on the continuing development in the field 3 to focus attention on the research of some of the seminal contributors to organic chemistry to indicate how their research programs progressed over a 20 40 year period and 4 to provide a documented source for individuals interested in the hows and whys of the development of modern organic chemistry

Chemistry in the Philosophical Melting Pot Zeidler Paweł, 2004 Chemistry is a natural science which has immensely influenced both the development of technology and of civilization transforming the world of our everyday life It is therefore something of a paradox of modern philosophy that it took so long for it to perceive chemistry as an incredibly complex and interesting subject suitable for philosophical discourse However from the beginning of the 1990s this discourse has been developing in a most dynamic way creating a veritable melting pot in which various chemical concepts and actions are being blended with philosophical and cultural ideas The authors of the 22 articles included in the presented volume have taken the opportunity to analyze various components of what may be termed the resulting alloy the philosophy of chemistry They discuss in detail the fundamental philosophical methodological and semiotic aspects characteristic of the theory and laboratory practice of chemistry They also reveal the alchemical roots of chemistry and its emergence as a modern theoretical and experimental scientific discipline These issues are examined both from the point of view of professional chemists and from that of the philosophers of science

From Small Organic Molecules to Large Herman Francis Mark, 1993 Herman Mark was internationally known for his research on the synthesis structure characterization reactions and properties of natural and synthetic polymers In this volume he describes not only his research contributions but also his First World War adventures he was the most highly decorated Austrian officer with fourteen medals for bravery the nature of his survival and escape

from the Nazis to the United States via Canada and his various contributions to the Allied effort during World War II The volume is rich with photographs covering Mark s nearly 100 years
