Modeling And Managing Shallow Lake Eutrophication With Application To Lake Balaton:

Modeling and Managing Shallow Lake Eutrophication Laszlo Somlyódy, Gerrit van Straten, 2012-12-06 In the late 1970s the adverse effects of man made eutrophication became manifest in many countries which explains perhaps why there was such a broad interest when the former Resources and Environment Area of the International Institute for Applied Systems Analysis IIASA organized a workshop on the subject There was such an enthusiasm among the participants that two further workshops were quickly organized one on deep and the other on shallow lake eutrophication problems The organization of these meetings was extremely stimulating and the round table discussions among scientists from both West and East remain thought provoking for those who took part The general feeling emerged that the complexity and multifaceted nature of the problem even though perhaps not fully recognized at that time clearly demanded a systems analysis approach No wonder then that the request made by the Hungarian Member Organization of nASA to adopt Lake Balaton as a real life laboratory for an nASA case study fell on fertile ground the more so since it appeared that shallow lake eutrophication had received less attention and was less well understood than that of deep lakes And so the nASA Lake Balaton Case Study began with the appointment of Gerrit van Straten as the first leader of the project Water Quality Modeling Brian

Henderson-Sellers, 1991-03-14 This volume represents the first decision support book aimed at water quality management for lakes and reservoirs The book offers both a retrospective view in terms of summarizing past work and a prospective view in terms of forecasting the greater use of such models as part of much needed environmental decision support systems The concepts of lake and reservoir simulation modeling as well as the concepts of decision support systems formalized within the information systems discipline are supported by a wealth of case studies Case studies in the early chapters concentrate more on the physical dynamic and thermodynamic parameters while later chapters stress the need for a more detailed representation of the biology and chemistry Other case studies emphasize the management use of the model New tools and concepts are also presented to facilitate the transfer of case studies presented in this volume from the arena of research to that of operational and planning management Water quality managers research scientists and water engineers will find this volume an exciting source of new ideas and concepts *Modeling and Managing Shallow Lake Eutrophication*, 1986

environmental processes are complex the easiest and most effective way to understanding them lies through the disciplines of dynamic modelling and computer simulation The prerequisite modelling fundamentals are presented in the first chapter in a manner comprehensible to students as well as to practising scientists and engineers The second chapter describes the many environmental processes that lend themselves to modelling for example pollution and wastewater treatment The third part of the book provides 65 simulation examples both on the page and on an accompanying diskette in the simulation language ISIM the first time that this has been done with a teaching book in this field ready to run on any DOS personal computer Crucially the simulation runs can be interrupted to allow rapid interactive parameter changes and easy plotting of results this enables the reader to get a feel for the model and system behaviour
