## **Modeling Business Objects With Xml Schema:**

*Modeling Business Objects with XML Schema* Berthold Daum, 2003-04-29 XML Schema is the new language standard from the W3C and the new foundation for defining data in Web based systems There is a wealth of information available about Schemas but very little understanding of how to use this highly formal specification for creating documents Grasping the power of Schemas means going back to the basics of documents themselves and the semantic rules or grammars that define them Written for schema designers system architects programmers and document authors *Modeling Business Objects with XML Schema* guides you through understanding Schemas from the basic concepts type systems type derivation inheritance namespace handling through advanced concepts in schema design Reviews basic XML syntax and the Schema recommendation in detail Builds a knowledge base model step by step about jazz music that is used throughout the book Discusses Schema design in large environments best practice design patterns and Schema's relation to object oriented concepts

*Business Processes for Business Communities* Frank Schönthaler, Gottfried Vossen, Andreas Oberweis, Thomas Karle, 2012-03-14 After a brief introduction to the topic of business process modeling the book offers a quick start into model based business process engineering After that the foundations of the modeling languages used are conveyed Meaningful examples are in the foreground each of the underlying formalisms is treated only as far as needed Next the Horus Method is described in detail The book defines a sequence of activities which finally leads to the creation of a complete business process model The Horus Method incidentally is not bound to the use of the Horus software tools It can be used with other tools or if necessary be used even without tool support Important application fields of business process engineering are described where the spectrum ranges from business process reengineering to the development and implementation of information systems The book concludes with an outlook on the future of business process engineering and highlights current research activities in the area

In an increasingly digital economy, mastering the quality of data is an increasingly vital yet still in most organizations a considerable task. The necessity of better governance and reinforcement of international rules and regulatory or oversight structures (Sarbanes Oxley, Basel II, Solvency II, IAS, IFRS etc.) imposes on enterprises the need for greater transparency and better traceability of their data. All the stakeholders in a company have a role to play and great benefit to derive from the overall goals here but will invariably turn towards their IT department in search of the answers. However, the majority of IT systems that have been developed within businesses are overly complex, badly adapted and in many cases obsolete. These systems have often become a source of data or process fragility for the business. It is in this context that the management of reference and master data or Master Data Management (MDM) and semantic modeling can intervene in order to straighten out the management of data in a forward looking and sustainable manner. This book shows how company executives and IT managers can take these new challenges as well as the advantages of using reference and master data management into account in answering questions such as: Which data governance functions are available? How can IT be better aligned with business regulations? What is the return on investment? How can we assess intangible IT assets and data? What are the principles of semantic modeling? What is the MDM technical architecture? In these ways they will be better able to deliver on their responsibilities to their organizations and position them for growth and robust data management and integrity in the future.
