Modeling the Performance of Engineering Structural Materials III Donald R. Lesuer, 2002-01-01 Analytical and computational modeling of all material forms including metals ceramics polymers and composites are covered in these proceedings as well as elastic and plastic deformation fracture and fatigue behavior durability and high rate deformation Material models studies involving the validation of modeling approaches and the use of modeling to study problems in engineering and science will receive special attention in this volume as will work on advanced structural materials that relates microstructure to performance      **Probabilistic Aspects of Life Prediction** W. Steven Johnson, B. M.

Hillberry, 2004 As fatigue and fracture mechanics approaches are used more often for determining the useful life and or inspection intervals for complex structures realization sets in that all factors are not well known or characterized Indeed inherent scatter exists in initial material quality and in material performance Furthermore projections of component usage in determination of applied stresses are inexact at best and are subject to much discrepancy between projected and actual usage Even the models for predicting life contain inherent sources of error based on assumptions and or empirically fitted parameters All of these factors need to be accounted for to determine a distribution of potential lives based on combination of the aforementioned variables as well as other factors The purpose of this symposium was to create a forum for assessment of the state of the art in incorporating these uncertainties and inherent scatter into systematic probabilistic methods for conducting life assessment      *Probabilistic Aspects of Life Prediction* ,      **University of Michigan Official Publication**
