Modelling Change In Integrated Economic And Environmental Systems:

Modelling Change in Integrated Economic and Environmental Systems S. Mahendrarajah, A. J. Jakeman, M. J. McAleer, Michael McAleer, 1999-11-05 This accessible volume fills a much needed gap and addresses core issues on how economic and environmental systems are interconnected looking at how economic frameworks and features of environmental systems can be integrated within formal models to address changes and associated resource management issues at appropriate levels micro level and national or global level The more the relationship between economic and environmental systems is studied analytically and empirically the more aware we become of the gap in our existing knowledge of environmental data and process parameters While important empirical questions are unanswered in environmental economics literature work on the environmental science of ecological systems fails to raise the right questions and identify key variables in human exploited ecosystems This book covers Concepts and Methods Land Water and Production Biodiversity Preservation and Production Pollution Externalities The Environment and Global Economy This timely book will be of interest to environmental scientists economists and policy makers students academics and researchers interested in ecosystems modelling ecological economics and environmental resource economics *Handbook of Computable General Equilibrium Modeling* Peter B. Dixon, Dale Jorgenson, 2012-12-04 Top scholars synthesize and analyze scholarship on this widely used tool of policy analysis in 27 articles setting forth its accomplishments difficulties and means of implementation Though CGE modeling does not play a prominent role in top U S graduate schools it is employed universally in the development of economic policy This collection is particularly important because it presents a history of modeling applications and examines competing points of view Presents coherent summaries of CGE theories that inform major model types Covers the construction of CGE databases model solving and computer assisted interpretation of results Shows how CGE modeling has made a contribution to economic policy **Modeling, Control and Optimization of Water Systems** Thomas Rauschenbach, 2015-12-14 This book provides essential background knowledge on the development of model based real world solutions in the field of control and decision making for water systems It presents system engineering methods for modelling surface water and groundwater resources as well as water transportation systems rivers channels and pipelines The models in turn provide information on both the water quantity flow rates water levels of surface water and groundwater and on water quality In addition methods for modelling and predicting water demand are described Sample applications of the models are presented such as a water allocation decision support system for semi arid regions a multiple criteria control model for run of river hydropower plants and a supply network simulation for public services *Ibss: Economics: 1999* Compiled by the British Library of Political and Economic Science, 2000-12-07 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences **MATHEMATICAL MODELS - Volume III** Jerzy A. Krawczyk,2009-09-19 Mathematical Models is a component of Encyclopedia of Mathematical Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme on Mathematical Models discusses matters of great relevance to our world such as Basic Principles of Mathematical Modeling Mathematical Models in Water Sciences Mathematical Models in Energy Sciences Mathematical Models of Climate and Global Change Infiltration and Ponding Mathematical Models of Biology Mathematical Models in Medicine and Public Health Mathematical Models of Society and Development These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *Mathematical Modeling in Economics, Ecology and the Environment* Natali Hritonenko,Yuri Yatsenko,2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations *Hybrid Solutions for the Modelling of Complex Environmental Systems* Christian E. Vincenot,Stefano Mazzoleni,Lael Parrott,2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology **Environmental protection in China** Xuehong Wang,2008 This is a useful book for those who

are interested in institutional economic and policy issues in China's ecosystem management environmental protection and poverty alleviation It is also a valuable reference book for university students who are studying environmental economics and development studies in general Yuelai Yu Environmental Sciences

Computational Models in the Economics of Environment and Development A.K. Duraiappah, 2012-12-06 Computational Models in the Economics of Environment and Development provides a step by step guide in designing developing and solving non linear environment development models It accomplishes this by focusing on applied models using real examples as case studies Additionally it gives examples of developing policy interventions based on quantitative model results Finally it uses a simple computer program GAMS to develop and solve models This book is targeted towards university lecturers and students in economic modeling and sustainable development but is also of particular interest to researchers at sustainable development research institutes and policy makers at international sustainable development policy institutions such as the World Bank UNDP and UNEP

Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W. Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors

Economic Growth and the Environment Sander M. de Bruyn, 2012-12-06 Is economic growth good for the environment A number of economists have claimed that economic growth can benefit the environment recruiting political support and finance for environmental policy measures This view has received increasing support since the early 1990s from empirical evidence that has challenged the traditional environmentalist's belief that economic growth degrades the environment This book reviews the theoretical and empirical literature on growth and the environment giving an in depth empirical treatment of the relationship between the two Various hypotheses are formulated and tested for a number of

indicators of environmental pressure The test results indicate that alternative models and estimation methods should be used altering previous conclusions about the effect of economic growth on the environment and offering an insight into the forces driving emission reduction in developed countries **Handbook of Irrigation Hydrology and Management** Saeid

Eslamian,Faezeh Eslamian,2023-05-31 Ever increasing population growth has caused a proportional increased demand for water and existing water sources are depleting day by day Moreover with the impact of climate change the rates of rainfall in many regions have experienced a higher degree of variability In many cities government utilities have been struggling to maintain sufficient water for the residents and other users The Handbook of Irrigation Hydrology and Management Irrigation Case Studies examines and analyzes irrigated ecosystems in which water storage applications or drainage volumes are artificially controlled in the landscape and the spatial domain of processes varies from micrometers to tens of kilometers while the temporal domain spans from seconds to centuries The continuum science of irrigation hydrology includes the surface subsurface unsaturated and groundwater systems atmospheric and plant subsystems Further the book includes practical case studies from around the world including locations such as Africa Australia China India the Middle East the United States and more Features Offers water saving strategies to increase the judicious use of scarce water resources Presents strategies to maximize agricultural yield per unit of water used for different regions Compares irrigation methods to offset changing weather patterns and impacts of climate change *Integrated Uncertainty in Knowledge Modelling and Decision Making* Van-Nam Huynh,Katsuhiro Honda,Bac Le,Masahiro Inuiguchi,Hieu T. Huynh,2025-05-02 This two volume set constitutes the proceedings of the 11th International Symposium on Integrated Uncertainty in Knowledge Modelling and Decision Making IUKM 2025 held in Ho Chi Minh City Vietnam during March 17 19 2025 The 55 full papers in this book were carefully reviewed and selected from 116 submissions They were organized in topical sections as follows Part I Invited Talks Machine Learning Pattern Recognition and Data Analysis Applications Part II Uncertainty Management and Decision Making Optimization and Statistical Methods Applications **Integrated Environmental Modelling to Solve Real World Problems** A.T. Riddick,H. Kessler,J.R.A. Giles,2017-01-10 The discipline of Integrated Environmental Modelling IEM has developed in order to solve complex environmental problems for example understanding the impacts of climate change on the physical environment IEM provides methods to fuse or link models together this in turn requires facilities to make models discoverable and also to make the outputs of modelling easily visualized The vision and challenges for IEM going forward are summarized by leading proponents Several case studies describe the application of model fusion to a range of real world problems including integrating groundwater and recharge models within the UK Environment Agency and the development of catastrophe models to predict better the impact of natural hazards Communicating modelling results to end users who are often not specialist modellers is also an emerging area of research addressed within the volume Also included are papers that highlight current developments of the technology platforms underpinning model fusion *Spatially Integrated Social*

Science Michael F. Goodchild, Donald G. Janelle, 2004-01-15 Spatial analysis assists theoretical understanding and empirical testing in the social sciences and rapidly expanding applications of geographic information technologies have advanced the spatial data gathering needed for spatial analysis and model making This much needed volume covers outstanding examples of spatial thinking in the social sciences with each chapter showing some aspect of how certain social processes can be understood by analyzing their spatial context The audience for this work is as trans disciplinary as its authorship because it contains approaches and methodologies useful to geography anthropology history political science economics criminology sociology and statistics

A Systems Approach to Modeling the Water-Energy-Land-Food Nexus, Volume II Bernard Amadei, 2019-02-13 This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Over the next 50 years rapid population urbanization and economic growth worldwide will create unprecedented demands for water energy land and food WELF resources The discussion on how to meet human needs for WELF resources and how to guarantee their respective securities has changed over time from looking at all four sectors in isolation to understanding their interdependency through the so called WELF nexus The approach presented in this book responds to the overall agreement in the WELF nexus literature that the management and allocation of WELF resources at the community level need to be examined in a more systemic multidisciplinary participatory and practical manner while seeking to increase synergies and reduce trade offs This book was written to explore the value proposition of that approach This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Volume 1 focuses on defining the landscape in which the nexus operates and outlines the proposed methodology Volume 2 explores the quantitative and qualitative modeling of the nexus and landscape using system modeling tools including system dynamics It presents a road map for the formulation simulation selection and ranking of possible intervention plans The proposed methodology is designed to serve as a guide for different groups involved in the science and policy decision aspects of the WELF nexus within the context of community development The methodology focuses mostly on WELF related issues in small scale and low income communities where securing resources is critical to their short and long term livelihood and development

Integrated Modelling of Ecosystem Services and Land-Use Change Youjia Liang, Lijun Liu, Jiejun Huang, 2019-10-17 This book presents essential case studies on the integrated modelling of ecosystem services and land use change in the field of landscape ecology The case studies were mainly conducted in the Zhangye oasis of the Hexi corridor and the upper reaches of the Heihe river basin including Loess plateau for wind power and the inland waterways of the Yangtze River for the regulation of extreme events The book puts forward an integrated modelling method including human activities natural processes land use change and ecosystem management and explores multiple scenarios based on the interests of local managers and their implications for ecosystem services As the book demonstrates the integrated modelling

method for ecosystem services and land use change can serve as a valuable tool for gauging the impact of various development scenarios in this study area and in other regions with similar characteristics. In addition, numerous charts and diagrams are included in each chapter facilitating the simulation and assessment of specific land use change impacts on ecosystem services in various study areas.

Developing Sustainable Food Systems, Policies, and Securities Obayelu, Abiodun Elijah, Obayelu, Oluwakemi Adeola, 2020-04-17 A food system is sustainable if it delivers food and nutrition security for all without compromising the economic, social, and environmental bases to generate food security and nutrition for future generations. Sustainable food systems are vital in ensuring global health and ending malnutrition in all its forms. Assessing important dimensions of the food system such as nutrition, sustainable agriculture, food loss, and waste can provide stakeholders with necessary information to evaluate the strength of their country's food systems and determine where more support is needed. *Developing Sustainable Food Systems: Policies and Securities* is a pivotal reference source that explores the nature, extent, and causes of nutrition problems across the world as well as the role that agricultural policy plays in these issues. The book supports the development of sustainable food systems policy options and securities by various countries in order to successfully maintain sustainable food production systems. Featuring research topics such as food security, carbon emissions, and nutrition, the book is ideally designed for economists, environmentalists, food producers, policymakers, researchers, academicians, and students seeking coverage on agricultural and sustainability issues.
