Modelling For Population And Sustainable Development:

Theory and Implementation of Economic Models for Sustainable Development J.C. van den Bergh, M.W.

Hofkes, 2013-03-09 There is widespread concern for long term environmental issues in relation to economic processes and developments Among the concerned scientists are economists who have taken up the challenge to apply economic insights and tools for the study of long term environment economy interactions and to give the concept of sustainable development economic hands and feet This book presents a pluralistic perspective on efforts problems and successes in this area This collection of papers was originally prepared for an international symposium titled Economic Modelling of Sustainable Development Between Theory and Practice which was hosted by the Vrije Universiteit in Amsterdam on December 20th 1996 The main motivation for this symposium was that the usefulness of the concept of sustainable development for theoretical and applied modelling is still being debated growth theorists resource economists ecological economists policy makers and many others are trying to deal with the concept in various and sometimes conflicting ways The aim of the symposium was to bring together different theoretical and implementational perspectives on modelling for sustainable development We hope that this volume will inform a wide audience about the perspectives and progress in this important area of research as well as stimulate further research notably on applied modelling and practical methods for the analysis of sustainable development at various spatial scales The papers have in due course been revised several times based on comments made by discussants referees and the editors

Response, management, and restoration Chunhui Li, Qiang Liu, Celso Santos, 2023-03-31 *Geospatial Analysis and Modelling of Urban Structure and Dynamics* Bin Jiang, Xiaobai Yao, 2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography's quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial autocorrelation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style

of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied Corporate Responsibility and Sustainable Development Lez Rayman-Bacchus, Philip R Walsh, 2021-07-04 This book explores the overlapping interests of corporate responsibility and sustainable development specifically focusing on the dynamics of social change sustainability governance and evaluation and creating social value Corporate Responsibility and Sustainable Development An Integrative Perspective draws on ideas and research relevant to both concepts highlighting the interdependent nature of corporate strategy and policymaker ambition The authors seek to capture that any evaluation of responsibility for sustainable development demands multiple lenses They propose an integrative understanding to tackling global challenges around sustainable development and focus on four themes contextualisation perspectives on social change sustainability governance and evaluation and creating social value Overall the book takes an evaluative approach using these themes as lenses for engaging with global challenges which encourages reflection and informed action Written by two highly experienced authors this book integrates short case studies and chapter questions throughout the text in order to reinforce learning and help readers reconcile ideas presented with real world issues It will be an essential resource for tutors and advanced undergraduate and postgraduate students of business governance and corporate governance corporate social responsibility CSR sustainability and sustainable development stakeholder theory business ethics and politics **Score Plus CBSE**
