

# Modelling Language

## What is it?

Modelling involves talking clearly to your child at a level they will understand, so that your child can learn what words to use and when to use them

## How do I use modelling?

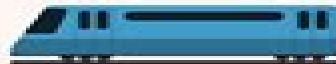

Speak clearly in short and easy to understand sentences. Limit the number of questions you ask. Praise your child's attempts to communicate even if it's not exactly the same as your model. Name objects, actions and attributes (eg colour, size, number) constantly for your child as he/she comes across them.

### Example

Adult: "Here's a big train. Big trains go fast. Red train. It's a train. (model)"

Child: "Bi train"

Adult: "Yes a big train" (praise and remodel)

## How can this help?

Children usually understand words before they can produce them.

It is important for children to understand words as this comes before the ability to produce them

Modelling is an effective way of teaching your child what word to say and when to use the word.

Modelling provides an example of how sounds are made and how sentences are put together.

## When and Where do I use it?

Everywhere! In the car, at the dinner table, during book reading, at bath time and during play.

**Human Pose Estimation with Implicit Shape Models** Brauer, Juergen, 2014-04-29 This work presents a new approach for estimating 3D human poses based on monocular camera information only For this the Implicit Shape Model is augmented by new voting strategies that allow to localize 2D anatomical landmarks in the image The actual 3D pose estimation is then formulated as a Particle Swarm Optimization PSO where projected 3D pose hypotheses are compared with the generated landmark vote distributions

*Computer Vision* Simon J. D. Prince, 2012-06-18 This modern treatment of computer vision focuses on learning and inference in probabilistic models as a unifying theme It shows how to use training data to learn the relationships between the observed image data and the aspects of the world that we wish to estimate such as the 3D structure or the object class and how to exploit these relationships to make new inferences about the world from new image data With minimal prerequisites the book starts from the basics of probability and model fitting and works up to real examples that the reader can implement and modify to build useful vision systems Primarily meant for advanced undergraduate and graduate students the detailed methodological presentation will also be useful for practitioners of computer vision Covers cutting edge techniques including graph cuts machine learning and multiple view geometry A unified approach shows the common basis for solutions of important computer vision problems such as camera calibration face recognition and object tracking More than 70 algorithms are described in sufficient detail to implement More than 350 full color illustrations amplify the text The treatment is self contained including all of the background mathematics Additional resources at [www.computervisionmodels.com](http://www.computervisionmodels.com)

**The Naïve Bayes Model for Unsupervised Word Sense**

**Disambiguation** Florentina T. Hristea,2012-11-07 This book presents recent advances from 2008 to 2012 concerning use of the Na ve Bayes model in unsupervised word sense disambiguation WSD While WSD in general has a number of important applications in various fields of artificial intelligence information retrieval text processing machine translation message understanding man machine communication etc unsupervised WSD is considered important because it is language independent and does not require previously annotated corpora The Na ve Bayes model has been widely used in supervised WSD but its use in unsupervised WSD has led to more modest disambiguation results and has been less frequent It seems that the potential of this statistical model with respect to unsupervised WSD continues to remain insufficiently explored The present book contends that the Na ve Bayes model needs to be fed knowledge in order to perform well as a clustering

technique for unsupervised WSD and examines three entirely different sources of such knowledge for feature selection WordNet dependency relations and web N grams WSD with an underlying Na ve Bayes model is ultimately positioned on the border between unsupervised and knowledge based techniques The benefits of feeding knowledge of various natures to a knowledge lean algorithm for unsupervised WSD that uses the Na ve Bayes model as clustering technique are clearly highlighted The discussion shows that the Na ve Bayes model still holds promise for the open problem of unsupervised WSD
