The Role of Communication in Learning To Model Paul Brna, Michael Baker, Keith Stenning, Andree

Tiberghien, 2014-05-12 This book is much more education driven than expected I thought it was more likely to be at modelling HCI end I think I need to work on an ABI blurb with this in mind Lots of contributors were dropped which may be why it came out with this emphasis

Formal Methods and Object Technology Stephen J. Goldsack, Stuart J.H. Kent, 2012-12-06 Rationale Software engineering aims to develop software by using approaches which enable large and complex program suites to be developed in a systematic way However it is well known that it is difficult to obtain the level of

assurance of correctness required for safety critical software using old fashioned programming techniques The level of safety required becomes particularly high in software which is to function without a break for long periods of time since the software cannot be restarted and errors can accumulate Consequently programming for mission critical systems for example needs to address the requirements of correctness with particular care In the search for techniques for making software cheaper and more reliable two important but largely independent influences have been visible in recent years These are Object Technology Formal Methods First it has become evident that objects are and will remain an important concept in software Experimental languages of the 1970 s introduced various concepts of package cluster module etc giving concrete expression to the importance of modularity and encapsulation the construction of software components hiding their state representations and algorithmic mechanisms from users exporting only those features mainly the procedure calling mechanisms which were needed in order to use the objects This gives the software components a level of abstraction separating the view of what a module does for the system from the details of how it does them

M. Lee, Ben-Zion Barta, Peter Juliff, 2013-04-17 As the world becomes increasingly dependent on the use of computers the need for quality software which can be produced at reasonable cost increases This IFIP proceedings brings together the work of leading researchers and practitioners who are concerned with the efficient production of quality software *Information Modeling of Organizations* Vaclav Repa, 2012-10 This book is about the information modeling of organizations in the widest sense possible This term express the general meaning of the term organizational modeling with the light flavor of informatics practices rather than just the IS or IT view of the organization Although the topic of the cognition of organizational structure and behavior traditionally belongs to the management theory informatics brings to this area the necessary exactness in the shape of formal specifications and a systemic style of thinking Informatics is a source of sophisticated techniques and tools aimed on discovering the general regularities of the organizational structure and behavior often called business rules with the ability to abstract all non contentual aspects of the organizational system Information technology on the other hand is a key enabler of organizational changes as it is established in all literature mentioning the theory of business reengineering Consequently the well designed Information System must be a clear picture of all substantial aspects of the organization both the structural and the behavioral ones Information modeling aims to create the view of the organization which is on the one hand independent of any non contentual aspect including the information technology at first on the other it is fully consistent with following the process of the development of the Information System i e the infrastructure in general The book introduces the methodology for modeling the business system based on two complementary views which covers both ontology and business process model of the organization using standard languages UML and BPMN and including tools for ensuring the consistency of both models The book also outlines the original methodology for service oriented building of the process managed organization and discusses the problem of the process oriented management in the field of public administration *OBJECT-ORIENTED SOFTWARE ENGINEERING* YOGESH SINGH, RUCHIKA MALHOTRA, 2012-03-05 This comprehensive and well written book presents the fundamentals of object oriented software engineering and discusses the recent technological developments in the field It focuses on object oriented software engineering in the context of an overall effort to present object oriented concepts techniques and models that can be applied in software estimation analysis design

testing and quality improvement It applies unified modelling language notations to a series of examples with a real life case study The example oriented approach followed in this book will help the readers in understanding and applying the concepts of object oriented software engineering quickly and easily in various application domains This book is designed for the undergraduate and postgraduate students of computer science and engineering computer applications and information technology

KEY FEATURES Provides the foundation and important concepts of object oriented paradigm Presents traditional and object oriented software development life cycle models with a special focus on Rational Unified Process model Addresses important issues of improving software quality and measuring various object oriented constructs using object oriented metrics Presents numerous diagrams to illustrate object oriented software engineering models and concepts Includes a large number of solved examples chapter end review questions and multiple choice questions along with their answers

Database Reengineering and Interoperability

T.Y. Cheung,J. Fong,B. Siu,2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors
