Modern Biogeochemistry:

Modern Biogeochemistry V.N. Bashkin, 2007-05-08 Modern Biogeochemistry is aimed to generalize modern ideas of biogeochemical developments during the last decades It is designed to support a general course in biogeochemistry and as such is likely to have a broad market among the many universities and colleges that are adding such courses to their curricula This book aims to supplement the existing textbooks by providing modern understanding of biogeochemistry from evolutionary biogeochemistry to practical applications of biogeochemical ideas such as human biogeochemistry biogeochemical standards and biogeochemical technologies To a certain extent this textbook is a summary of both scientific results of various authors and classes in biogeochemistry that have been given to students by authors during the last 5 to 10 years at different universities throughout the world such as Cornell Moscow Seoul and Bangkok Biogeochemistry is becoming an increasingly popular subject for graduate and postgraduate education Courses in ecology geography biology chemistry environmental science public health and environmental engineering all tend to have a biogeochemical component in their syllabuses to a greater or lesser extent

Modern Biogeochemistry Vladimir N. Bashkin, 2006-12-29 At present quantitative ecological risk assessment is widely used in different contexts however very often without an understanding of the natural mechanisms that drive the processes of environmental and human risk Its application is often accompanied by high uncertainty about risk values On the other hand the sustainability of modern technoecosystems is known because of their natural biogeochemical cycling that has been transformed to various extents by anthropogenic studies Accordingly our understanding of the principal mechanisms that drive the biogeochemical food webs allows us to present a quantitative ecological risk assessment and to propose technological solutions for management of various ERA enterprises It also enables us to devise a powerful mechanism for ecological insurance to assign responsibilities and protect rights while managing the control of damage from natural and anthropogenic accidents and catastrophes
