Burden, J. Douglas Faires, 1993 Gives an introduction to the modern approximation techniques and explains how, why, and when the techniques can be expected to work. The authors focus on building students' intuition to help them understand why the techniques presented work in general and why in some situations they fail. With a wealth of examples and exercises, the text demonstrates the relevance of numerical analysis to a variety of disciplines and provides ample practice for students. These are actually run so that students can see the importance of working through each step of an algorithm by hand. Topics are chosen for their contribution to the students' ability to reason abstractly. For example, Matrices introduces the topic from the study of arrays. Disjunctive Forms does not rely on the typical Karnaugh Maps and Quine McClusky Algorithm to find the minimal forms of any given proposition, and Planarity presents a complete planarity algorithm allowing the student to master a tough, interesting procedure.
