Modern pharmacology and toxicology is a branch of medicine biology and the pharmaceutical sciences that studies how drugs and medicines work A drug can be any molecule whether it is made in a lab found in nature or made by the body itself To describe any species either endogenous or foreign that influences the biochemistry or physiology of a cell tissue organ or organism the term pharmacology is occasionally used The study of interactions between living things and substances that influence both normal and aberrant biochemical activity is what it is known as in more particular terms Pharmaceuticals are any compounds that may be used to treat or prevent disease Toxicology is a field that draws from many other scientific disciplines hence the work and interests of toxicologists span many areas As we now know that all compounds may cause toxicity according to the exposure time and dosage toxicologists are primarily interested in the mechanisms of action of various agents Nonetheless scientists are currently trying to determine the routes of endogenous molecules that are affected by even the most well known and ancient substances which results in toxicity **Studies in the History of Modern**

Modern Drug use R.D. Mann, 2012-12-06 Aureolus Theophrastus Bombastus von Hohenheim 1493-1541 commonly called Paracelsus was both one of the most original medical thinkers of the sixteenth century and was the man who made opium, laudanum, arsenic, copper sulphate, iron, lead, mercury, potassium sulphate and sulphur part of the pharmacopoeia. A man of many parts but a pioneer chemist, Paracelsus can be regarded as the originator of a body of work which was the precursor of chemical pharmacology and therapeutics. To no small extent he stands therefore as a father figure of the modern pharmaceutical industry. Today's physician who wants to look at that industry since the days of Paracelsus and weigh the great gains against the problems soon encounters difficulties. To diminish them this Enquiry approaches its subject from historical principles. This gives increased perspective to questions asked late in the book, these questions being prompted by medical practice outside the industry and some twenty years of drug development activity within it. In antiquity medicines often seem to have been used as part of magic and primitive man thought disease to be due to supernatural forces which he could influence. The legacy remains and in trying to sort out what is rational in our use of drugs today we have to separate our small bits of science from the ancient magic and from modern commercial pressures and conditioning.
