**Mismanagement in African Governments** Dr. Alain Mortha, 2016-03-31 This book emanates from the authors doctoral dissertation research that explored African government mismanagement practices by focusing on the pilot case study of Chad in Central Africa Two of Chads positions that are most bothersome and disconcerting to the author are least favorable place in the world to conduct business according to the World Bank and one of twenty countries in the world where corruption is most existent as adjudged by Transparency International Being born and raised in Chad the author was so shocked by these statistics that his chief desire in writing this book is to propose some sort of solution that may help African countries enhance the management of public resources rather than pointing a finger of blame A comparative investigation of

the management practices during the autocratic regime of former president Hissein Habr and the democratic regime of current president Idriss Dby Itno was conducted This book begins with an overview of previous Chadian governments the history of corruption in Chad and a description of mismanagement practices during the regimes of Habr and Dby as revealed through research An overview of the mismanagement practices in Sub Sahara African governments also illustrates the similarities between Chad and these countries The author provides a theoretical framework used to conduct his research as well as several leadership models that he believes would be useful for African governments The book ends with the authors proposed customized Scholar Practitioner Leader SPL model based on ethics and TQM to enhance the management of public resource and a discussion about the limits of his research plus recommendations for future research The results of the study were shocking to say the least and raised questions about the viability of the Occidental democracy imposed in Africa by developed countries Will some African countries be better off with a benevolent dictatorship rather than a democratic regime Find more in the book [Understanding Oil and Gas Shows and Seals in the Search for Hydrocarbons](#) John

Dolson,2016-06-15 This book explains in detail how to use oil and gas show information to find hydrocarbons It covers the basics of exploration methodologies drilling and mud systems cuttings and mud gas show evaluation fundamental log analysis the pitfalls of log calculated water saturations and a complete overview of the use of pressures to understand traps and migration hydrodynamics and seal and reservoir quantification using capillary pressure Also included are techniques for quickly generating pseudo capillary pressure curves from simple porosity permeability data with examples of how to build spreadsheets in Excel and a complete treatment of fluid inclusion analysis and fluid inclusion stratigraphy to map migration pathways In addition petroleum systems modeling and fundamental source rock geochemistry are discussed in depth particularly in the context of unconventional source rock evaluation and screening tools for entering new plays The book is heavily illustrated with numerous examples and case histories from the author s 37 years of exploration experience The topics covered in this book will give any young geoscientist a quick start on a successful career and serve as a refresher for the more experienced explorer **Applied Data Science** Martin Braschler,Thilo Stadelmann,Kurt Stockinger,2019-06-13

This book has two main goals to define data science through the work of data scientists and their results namely data products while simultaneously providing the reader with relevant lessons learned from applied data science projects at the intersection of academia and industry As such it is not a replacement for a classical textbook i e it does not elaborate on fundamentals of methods and principles described elsewhere but systematically highlights the connection between theory on the one hand and its application in specific use cases on the other With these goals in mind the book is divided into three parts Part I pays tribute to the interdisciplinary nature of data science and provides a common understanding of data science terminology for readers with different backgrounds These six chapters are geared towards drawing a consistent picture of data science and were predominantly written by the editors themselves Part II then broadens the spectrum by presenting

views and insights from diverse authors some from academia and some from industry ranging from financial to health and from manufacturing to e commerce Each of these chapters describes a fundamental principle method or tool in data science by analyzing specific use cases and drawing concrete conclusions from them The case studies presented and the methods and tools applied represent the nuts and bolts of data science Finally Part III was again written from the perspective of the editors and summarizes the lessons learned that have been distilled from the case studies in Part II The section can be viewed as a meta study on data science across a broad range of domains viewpoints and fields Moreover it provides answers to the question of what the mission critical factors for success in different data science undertakings are The book targets professionals as well as students of data science first practicing data scientists in industry and academia who want to broaden their scope and expand their knowledge by drawing on the authors combined experience Second decision makers in businesses who face the challenge of creating or implementing a data driven strategy and who want to learn from success stories spanning a range of industries Third students of data science who want to understand both the theoretical and practical aspects of data science vetted by real world case studies at the intersection of academia and industry
