designated as Ecocultures are exemplars of the art and science of sustainable living. Though they form a diverse group, they organise themselves around several common organising principles including an ethic of care for nature, a respect for community, high ecological knowledge, and a desire to maintain and improve personal and social wellbeing. Case studies from both developed and developing countries, including Australia, Brazil, Finland, Greenland, India, Indonesia, South Africa, UK, and USA, show how, based on these principles, communities have been able to increase social, ecological, and personal wellbeing and resilience. They also address how other, more mainstream communities are beginning to transition to more sustainable, resilient alternatives. Some examples also illustrate the decline of ecocultures in the face of economic pressures, globalisation, and climate change. Theoretical chapters examine the barriers and bridges to wider application of these examples. Overall, the volume describes how ecocultures can provide the global community with important lessons for a wider transition to sustainability and will show how we can redefine our personal and collective futures around these principles.
