*Modern in the Middle* Susan Benjamin, Michelangelo Sabatino, 2020-09-01 The first survey of the classic twentieth century houses that defined American Midwestern modernism Famed as the birthplace of that icon of twentieth century architecture the skyscraper Chicago also cultivated a more humble but no less consequential form of modernism the private residence *Modern in the Middle Chicago Houses 1929-75* explores the substantial yet overlooked role that Chicago and its suburbs played in the development of the modern single family house in the twentieth century In a city often associated with the outside reputations of Frank Lloyd Wright and Ludwig Mies van der Rohe the examples discussed in this generously illustrated book expand and enrich the story of the region's built environment Authors Susan Benjamin and Michelangelo Sabatino survey dozens of influential houses by architects whose contributions are ripe for reappraisal such as Paul Schweikher Harry Weese Keck Keck and William Pereira From the bold early example of the Battledock House by Henry Dubin 1930 to John Vinci and Lawrence Kenny's gem the Freeark House 1975 the generation spanning residences discussed here reveal how these architects contended with climate and natural setting while negotiating the dominant influences of Wright and Mies They also reveal how residential clients typically middle class professionals progressive in their thinking helped to trailblaze modern architecture in America Though reflecting different approaches to site space structure and materials the examples in *Modern in the Middle* reveal an abundance of astonishing houses that have never been collected into one study until now Midcentury Houses Today Lorenzo Ottaviani, Jeffrey Matz, Cristina A. Ross, 2014-10-21 Architects Philip Johnson Marcel Breuer Landis Gores Eliot Noyes Edward Durrell Stone and others created an extraordinary collection of modern houses in New Canaan Connecticut in the 1940s and 1950s The bucolic New England town a suburb of Manhattan became the site of fervent experimentation by some of the leading lights of the movement in the United States the architects known as the Harvard Five whose modern aesthetic could be traced to the Bauhaus school of design There they promoted their core principles simplicity openness and sensitivity to site and nature and built glass wood steel and fieldstone houses that established architectural modernism as the ideal of domesticity in the twentieth century Architects Jeffrey Matz and Cristina A. Ross photographer Michael Biondo and graphic designer Lorenzo Ottaviani present this vanishing generation of iconic American houses as more than an issue of restoration or preservation but as an evolving legacy that adapts to contemporary life Selecting a representative group of sixteen houses covering the period between the 1950s and 1978 they portray each one in great detail with floor plans timelines and both archival and luminous new photography from the clean

minimalist look of the initial construction to subsequent additions by some of the most significant architects of our time including Toshiko Mori Roger Ferris and Joeb Moore Voices of the architects and builders original owners and current occupants combine to describe how the houses are enjoyed and lived in today and how the modernist residence is more than just a philosophy of design and construction but also a philosophy of living **The House as a Product A.**

Vogler,2016-03-10 Industrialized housing has been a common phenomenon in the building industry since the industrial revolution the casting of iron components enabled Victorian iron casters to prefabricate entire buildings and to export them to all British colonies It got a second boost from Modernist architects like Ludwig Mies van der Rohe Walter Gropius and Konrad Wachsmann and a third boost in the US when the soldiers came back from the Second World War in 1945 and wanted to buy a ready made house In the later decades of the 20th century composite prototypes were built Timber frame houses are extremely popular in low density areas worldwide For densely populated areas housing is now firmly attached to reinforced concrete The contracting industries have developed efficient building methods for the concrete structures on which separate systems of claddings are fixed to form a house However in the coming decades designers builders and scientists also have to keep the environment in mind working with a minimal amount of materials and for minimizing embodied energy and energy use In the coming age minimal embodied energy and low ecological footprints are renewed values that will be added to energy positive housing and that will have an influence on the building technology of the future This will lead to a reformation of the building vocabulary Other materials will have to be chosen and developed to function in building elements and components **The National Real Estate Journal** ,1923 General Housing Legislation, Hearings Before a Subcommittee of ..., 81-1 on S. 138, S. 685, S.686 ..., February 3 .. 212, 1949 United States.
