Bioterrorism Daniela Georgiana GOLEA, Catalin HIDEG, 2022-09-07 These are just some of the questions to be addressed in this paper We do not pretend to give the final and complete answers as the field under study still has many grey areas and even some areas completely unexplored by scientific research We aim to at least open the discussion on the subject of bioterrorism without claiming to be the supreme authority in the field or the final voice We do not even pretend that our work is relevant in terms of security solutions in such a complex and fluid security environment where situations and states of affairs can change dramatically from year to year However our aim in this series of papers on bioterrorism is to clarify a number of notions concepts and theoretical or practical issues necessary for the general public to understand what bioterrorism is all about and what we should expect in the coming years At the time of writing the COVID 19 crisis is still in full swing despite some apparent improvements over the last few weeks This may only be the beginning of a series of widening and deepening crises that are hitting human society again and again confronting it with great existential questions The current COVID 19 crisis is and will continue to be followed by severe economic and social impacts that are almost impossible to predict Situations in which crises break out everywhere and in all sorts of ways and situations in which the states of the world are gathering into increasingly isolated and hostile groups are nothing other than the specific preconditions for the outbreak of world conflicts We have no intention whatsoever of promoting defeatism or of creating and spreading alarmist rumours for who knows what obscure purposes The situation is simply worrying at times reaching alarming levels that go beyond mere fear of the future The bioterrorist phenomenon is beginning to emerge more and more

clearly as a concrete threat to the present and the near future From this point of view an effort will have to be made or at least begun to enlighten the general public on how this new threat could materialise Authors C t lin Hideg Daniela Georgiana Golea The Phytologist Alexander Irvine,1859 Advances in Fungal Biotechnology Mahendra Rai,2009 In the past two decades fungal biotechnology has progressed at a fast pace Advances in Fungal Biotechnology provides coverage of these advances and of the multiple roles played by fungi This includes the industrial applications of fungi for the production of pigments citric acid and vitamins the beneficial effects of mycorrhizal fungi mycoviruses and biotransformation Key features Focuses on Biocontrol strategies of fungi Deals with the role of fungal enzymes xylanases and laccases Discusses mycoviruses as an emerging tool for controlling pathogenic fungi Incorporates industrial applications such as the production of pigments citric acid and vitamins Addresses biotransformation by fungi Illustrates the role of mycorrhizal fungi in revegetation programmes Covers health implications allergy mycotoxins tinea infections Examines the role of the internet in Mycology
