and the Syntax-Semantics of the Object and Subject Miren J. Hodgson,2010-08 This dissertation presents a study on the acquisition of telicity by Spanish and English native speakers In addition to the study of acquisition it investigates the

syntactic and semantic properties of locatum constructions e.g. the water filled the bucket which are sentences that contain two internal arguments and whose subject is non agentive This dissertation explores the syntactic and semantic properties of elements of the verb phrase that had not been previously considered in the interpretation of telicity such as the role of non agentive subjects and the type of movement that takes place in the checking of the verb's telic features Contrary to the assumption that only the direct internal argument of the verb can delimit an event I argue that objects generated in the lower verb phrase by virtue of being an internal argument of the verb can delimit an event An object delimits an event by checking the verb's telic features in spec AspP either by covert or overt movement If a predicate contains one internal argument e.g. the boy filled the bucket the checking of the verb's telic features takes place via covert movement That is only the NPs specific quantification features move covertly to check the verb's telic features in spec AspP However if the predicate contains two internal arguments e.g. fill the bucket with water the surfaced subject e.g. the water filled the bucket by virtue of being an internal argument of the verb checks the verb's telic features as the category and its features move overtly to subject position The study shows that young children understand telicity when the verb's telic features are checked via overt movement but have difficulties understanding telicity when the verb's telic features are checked via covert movement I propose that predicates whose telicity involves overt movement should be acquired earlier than predicates whose telicity involves covert movement because overt movement is an operation that happens between D structure and S structure before the sentence is pronounced Predicates whose telicity involves covert movement might be acquired at a later age of development because covert movement happens between S structure and LF after the sentence is pronounced

Conflicts and Conciliations Geoffrey Ribbans, 1997 Between 1881 and 1897 Benito Pérez Galdós generally acknowledged as Spain's greatest nineteenth century novelist composed some twenty contemporary novels which Geoffrey Ribbans characterizes as the peak of his achievement This monumental study traces the evolution of the many strands that make up one of them the long and complex novel *Fortunata y Jacinta* Ribbans examines the various stages of composition not only the earlier reconstructed Alpha version but also subsequent revisions in the much corrected handwritten text and in the printer's galleys He treats these tentative drafts as part of the process of reaching out toward the coherent definitive text Ribbans's analysis of such devices as the ambiguous role of the narrator the use of free indirect style and direct dialogue and the construction of distinctive *ideolects* leads to the heart of his study the development of Galdós's characters

The Amazon Mark J. Plotkin, 2020 The Amazon is a land of superlatives The complex ecosystem covers an area about the size of the continental U.S. The Amazon River discharges 57 million gallons of water per second in two hours this would be enough to supply all of New York City's 7.5 million residents with water for a year Its flora and fauna are abundant Approximately one of every four flowering plant species on earth resides in the Amazon A single Amazonian river may contain more fish species than all the rivers in Europe combined It is home to the world's largest anteater armadillo freshwater turtle and spider as well as the

largest rodent which weighs over 200 lbs catfish 250 lbs and alligator more than half a ton The rainforest which contains approximately 390 billion trees plays a vital role in stabilizing the global climate by absorbing massive amounts of carbon dioxide or releasing it into the atmosphere if the trees are destroyed Severe droughts in both Brazil and Southeast Asia have been linked to Amazonian deforestation as have changing rainfall patterns in the U S Europe and China The Amazon also serves as home to millions of people Approximately seventy tribes of isolated and uncontacted people are concentrated in the western Amazon completely dependent on the land and river These isolated groups have been described as the most marginalized peoples in the western hemisphere with no voice in the decisions made about their futures and the fate of their forests In this addition to the What Everyone Needs to Know series ecologist and conservation expert Mark J Plotkin who has spent 40 years studying Amazonia its peoples flora and fauna The Amazon offers an engaging overview of this irreplaceable ecosystem and the challenges it faces
