Computer Analysis of Images and Patterns André Gagalowicz, 2005-08-30 This volume presents the proceedings of the 11th International Conference on Computer Analysis of Images and Patterns CAIP 2005 This conference series started about 20 years ago in Berlin Initially the conference served as a forum for meetings between scientists from Western and Eastern block countries Nowadays the conference attracts participants from all over the world The conference gives equal weight to posters and oral presentations and the selected presentation mode is based on the most appropriate communication medium The program follows a single track format rather than parallel sessions Non overlapping oral and poster sessions ensure that all attendees have the opportunity to interact personally with presenters As for the numbers we received a total of 185 submissions All papers were reviewed by two to four members of the Program Committee The final selection was carried out

by the Conference Chairs Out of the 185 papers 65 were lected for oral presentation and 43 as posters CAIP is becoming well recognized internationally and this year s presentations came from 26 di erent countries South Korea proved to be the most active scienti cally with a total of 16 cepted papers At this point we wish to thank the Program Committee and additional referees for their timely and high quality reviews The paper s mission and review procedure was carried out electronically We also thank the invited speakers Reinhardt Koch and Thomas Vetter for kindly accepting to present invited papers

Selective Sample Handling and Detection in High-Performance Liquid Chromatography, 1987-12-01 This book is the first of a two volume project which attempts to treat the sample handling and detection processes in a liquid chromatographic system in an integrated fashion The need for more selective and sensitive chromatographic methods to help solve the numerous trace analysis problems in complex samples is undisputed However few workers realize the strong interdependence of the various steps sample handling separation and detection which must be considered if one wants to arrive at an optimal solution By introducing a strong element of selectivity and trace enrichment in the sample preparation step fewer demands are placed on the quality of the chromatography and often a simple UV detector can be used By using a selective detection mode i e a reaction detector the sample handling step can frequently be simplified and more easily automated The impact of such a total system approach on

handling series of highly complex samples such as environmental specimens or biological fluids can be easily imagined Each chapter includes sufficient references to the literature to serve as a valuable starting point for more detailed investigation Special emphasis is placed on the sample handling and high priority has been given to the treatment of chemical principles applied to the topics presented rather than to instrumentation Written by experienced practitioners this volume will be of interest to investigators in many areas of application including environmental scientists and those active in the clinical pharmaceutical and bioanalytical fields
