Indexes to the Epilepsy Accessions of the Epilepsy Information System J. Kiffin Penry, 1978

The Neurobehavioral Treatment of Epilepsy David I. Mostofsky, Yngve Loyning, 2013-07-04 This volume is a first of its kind addressed principally to the professional reader While it is not intended to be exhaustive its aim is to sketch a broad picture of some of the nondrug and nonsurgical treatment strategies with a demonstrated basis in conventional scientific method Likewise though it does not include all those who have contributed to the emergence of this exciting new field it assembles those authors whose seminal work has earned them international reputations This volume's declared purpose is to provide a state of the art guide to methods and techniques in the behavioral treatment of epilepsy and to their basis in theory The editors hope that it will catalyze the evolution of their acceptance as standard elements where appropriate in the clinical activities of independent practitioners clinics and agencies that service those with convulsive disorders

Medical Psychiatry: Theory And Practice (In 2 Volumes) Enrique S Garza-trevino, 1989-04-01 The goal of this book is to provide a conceptual framework for understanding the relationship between the psychological areas of medicine and the more somatic aspects of health care in our current social environment

The Neuropsychology of Epilepsy Thomas L. Bennett, 2013-06-29 This was an exciting project to work on and I attempted to obtain a broad sampling of current research on the neuropsychology of epilepsy Because the emphasis of the book takes a neuropsychological perspective on epilepsy the coverage is not redundant with previous texts on this topic The book is organized around three themes although individual chapters certainly often extend beyond the part in which they are located The three major topics are the nature of epilepsy cognitive and emotional consequences of epilepsy and treatment approaches to epilepsy and outcome In Part I following a historical overview of epilepsy in Chapter 1 by Sandra D Haynes and me Gerald C McIntosh presents a conceptualization of the epilepsies from a neurologist's perspective The characteristics of seizure types are discussed and the etiology of secondary epilepsies is described Epileptic syndromes are considered McIntosh outlines clinical seizure patterns associated with seizures originating from different cortical regions

Quantitative Assessment in Epilepsy Care Harry Meinardi, Joyce A. Cramer, Gus A. Baker, Antonio Martins da Silva, 2012-12-06 Advances in epilepsy in recent decades have allowed for improved algorithms for diagnosis and a common understanding of terminology with the development of the International Classifications of Seizures and the Epilepsies Nevertheless no common system exists for the estimation of epilepsy severity or its impact on quality of life Therefore epileptologists lack the ability to make quantitative assessments of individual patients for comparison of care or for meta analyses in clinical trials This book on the Quantitative Assessment of Epilepsy Care approaches this omission by addressing the potential application of clinimetrics within the framework of

epilepsy treatment Clinimetrics is a fast growing discipline concerned with the quantification of clinical symptoms with respect to decision making relating to diagnosis treatment and prognosis These methods allow for the development and validation of clinical scoring systems For example the Glasgow Coma Scale is widely used As a chronic disorder epilepsy would benefit from clinimetric methodology to create uniformity and to allow for comparisons among evaluations In addition epileptologists have not yet developed assessments of health related quality of life to define the overall condition of the chronic epilepsy patient and various therapeutic endpoints While clinical metric tools are essential for research they will also be useful in clinical practice for the care of individual patients by documenting status and changes over time This treatise will provide critical analyses of whether existing rating scales and techniques are valid to use and which types of scales and techniques require further development Quality of Life in Epilepsy Gus A Baker, Gus A. Baker, Ann Jacoby, 2013-05-13

Though clinical aspects of epilepsy such as seizure control are crucially important to its management increasing attention is being given to wider quality of life issues Epilepsy continues to be an often misunderstood and stigmatising condition for the vast majority of people whose seizures can be well controlled the social and psychological repercussions are often of greater significance than the seizures themselves The increasing emphasis on the importance of non clinical outcomes in the assessment of new treatments and management strategies for chronic conditions such as epilepsy has stimulated interest in methodological issues in assessing quality of life This book reviews the recent literature on the impact of epilepsy on everyday experience and the methodological issues involved in assessing that impact It also considers the perspectives of a range of health professionals involved in caring for people with epilepsy and how through appropriate management the impact on their lives can be minimised **Epilepsy** Graham Scambler, 2005-09-23 In examining the social and psychological aspects of epilepsy the author takes not only the perspectives of individuals and their families but also popular conceptions of the disorder The result is an illuminating account of the social reality of epilepsy that demonstrates the distinctive contribution that the social sciences can play in understanding illness Methodological and Biostatistical Foundations of Clinical Neuropsychology and Medical and Health Disciplines Domenic V Cicchetti, Byron P Rourke, 2004-06-01 The goal of the second edition is to introduce the advance undergraduate or graduate student and more seasoned research scientists in any of the allied health sciences to a wide array of methodological and biostatistical issues as they occur in the context of both published and ongoing research Some sixty four articles published between 1992 and 2002 have been selected from the Journal of Clinical and Experimental Neuropsychology The Clinical Neuropsychologist and Child Neuropsychology and reproduced in this volume While building upon a working knowledge and understanding of the basic univariate data analytic techniques and the research designs to which they apply the approach to the more complex multivariate techniques is presented primarily at a conceptual and essentially non mathematical level While the issue of the complexity of some of the more recent and standard approaches to data analytic strategies and their important role to specific research designs is

important to convey there remains an even more fundamental issue of whether the results of correctly applied data analytic strategies make any practical or clinical sense above and beyond their having reached levels of statistical significance These critical issues are addressed throughout various commentaries that the editors make at appropriate points in the text The volume will appeal to advanced undergraduate and graduate students as well as clinical neuropsychologists and research scientists in any of the allied health disciplines

Biological Basis and Therapy of Neuroses Ashoka Prasad, 2018-01-18 Paradoxically it is the term neurosis more than perhaps any other which has the implication of organic basis Possibly the popular but erroneous belief that it implies impeded systematic biological research in this area On scrutiny it becomes obvious that there is considerable evidence for a biological basis to these hitherto ignored conditions This book endeavours to present this information in a systematic manner

Nussbaum,Sue R. Beers,2013-06-29 In this volume of the series Human Brain Function Assessment and Rehabilitation we cover the area of how brain function is assessed with behavioral or neuropsychological instruments These assessments are typically conducted by clinical neuropsychologists or behavioral neurologists and so we made an effort to present the somewhat differing approaches to these two related disciplines Clinical neuropsychologists are psychologists who typically utilize standardized tests while behavioral neurologists are physicians who generally assess brain function as part of the clinical neurological evaluation Both approaches have much to offer The basic assumption of neuropsychological assessment is that the brain is the organ of behavior and therefore the condition of the brain may be evaluated with behavioral measures Neuropsychological tests are those measures found by research to be particularly sensitive to alterations in brain function An adequate neuropsychological test is a procedure that can be related to some objective measure of alteration in brain function Over the years these objective measures have changed but generally involve documentation through direct observation of brain tissue or through histological pathological neuroimaging or other laboratory procedures The methods described in the first two volumes of this series describe the neuroimaging procedures that are often used in the validation of neuropsychological tests The Primary Care of Seizure Disorders Hugh B.
