Yumlembam, 2016-09-19 Food and agriculture is an important component in the development and survival of civilizations
Around half of the world's population and their economies are influenced by agricultural farm production Plant diseases take
as much as a 30 percent toll of the crop harvest if not managed properly and efficiently Bacterial diseases of crop plants are
important in plant disease scenarios worldwide and are observed on all kinds of cultivated and commercial value plants
including cereals pulses oilseeds fruits vegetables cash crops plantation crops spices ornamentals and flowering plant forage
crop forest trees and lawn grasses Bacterial diseases are widespread and are difficult to identify and to control Few
pesticides are available for use in control and many plant pathologists are not well trained in the management of bacterial
diseases Bacterial Diseases of Crop Plants offers concise information on bacterial diseases of crops proving a valuable asset
to students scientists in industry and academia farmers extension workers and those who deal with crops that are vulnerable
to bacterial diseases The book contains 13 chapters featuring bacterial diseases of individual crops and is illustrated with full
color photographs throughout providing amazing characterization of the diseases It also includes information on bacterial
diseases that appear on different crops across the continents thereby making the content of interest to plant pathologists
around the world Bacterial diseases are of great economic concern and their importance in overall losses caused by various
other pathogens such as fungi and viruses is often undermined in developing countries *Vegetable Diseases and Their*

CRC Handbook of Viruses Infecting Legumes John R. Edwardson, 2018-01-18 This interesting handbook discusses 145 plant viruses in 27 groups and 31 unclassified viruses in naturally infected legumes The viruses were observed in field infections of 281 species in 64 genera of the Leguminosae The book presents information regarding resistance sources and resistance breeding vectors seed transmission and host ranges Measurements of virus properties are organized in tabular form for particle dimensions serological relationships nucleic acid percentages sedimentation coefficients of particles and nucleic acids molecular weights of nucleic acids and coat proteins optical density and buoyant density Handbook of Viruses Infecting

Legumes is unique in that it relates inclusion cytology to plant virus detection identification and classification. Light and electron micrographs illustrate morphology, location, and staining reactions of inclusions. Of the 27 groups that contain viruses infecting legumes in nature, inclusions are diagnostic at the group level in 15 of these groups. Plant breeders, diagnosticians, plant virologists, and students of plant virology will find this an indispensable guide to legume viruses.
