

It is hard to disagree in general with the author's assessment of the present balance of world IT forces. Whether, as he maintains, the only likely change in this arrangement is a widening of the existing technology gaps, is far more debatable. A forecast of this nature demands more evidence than is given here.

Most of this book deals with technology rather than its uses. As Murphy himself states, there is a rapidly growing gulf between the potential of such technology and the capacity of users to fully exploit it. Moreover, the Japanese, who in Murphy's view are among the best adapted to the exploitation of IT, are presently in decline in respect of the effectiveness with which they use information. If, as these claims suggest, the national and international significance of IT is as much a question of use as of research and development and acquisition of hardware, then the relative neglect of this matter is a serious omission from this work. Indeed, given that the author regards the technological race as in effect already won, it follows that the losers (including Western Europe) might do better to ponder how to use their competitors' creations.

Murphy's treatment of the longer-term international implications of IT is nothing if not bold. He suggests that the Japanese, whose social and political cultures have made them peculiarly amenable to the use of IT and to the socio-political changes that it requires, will prosper to the extent that a major rupture in their relationship with the US may result from intensified trade rivalry. This rupture may lead to the formation of two new power blocs, with the USSR joining whichever appears the more technologically expedient. That US foreign policy-makers whether liberal or conservative would countenance such a development is to say the least an imaginative suggestion.

This is a thought-provoking work, despite its uneven style, which is admirably free of jargon. The reader will doubtless find much with which to argue. (Ponder for instance whether Mr Gorbachev would be well advised in a quick invasion of Western Europe to capture an IT industry or two.) The history of the computer industry, with which the work begins, is a lively piece of writing which on its own makes the book worth reading.

If some edited volumes are more easily reviewed than others it is because the editor(s) have made such an excellent job of organisation and presentation. This is the case with this volume: seldom have I seen such a wide range of contributions gel together in such a coherent structure.

Tsai, 2001-12-17 China and Taiwan are two of the fastest growing economies of the newly industrialized countries Much of their growth has come from multinational companies partly it has often been assumed because the region provides a pollution haven which the multinationals would not enjoy elsewhere Corporate Environmentalism in China and Taiwan tests this hypothesis with detailed empirical research Focusing on the chemical sector the author compares the policies and behaviour of three multinational corporations with three large local firms The research shows that in fact the multinational companies have out performed local companies in the phenomenon of greening

**Insatiable Appetite** Richard P. Tucker, 2000-11-01 In the late 1800s American entrepreneurs became participants in the 400 year history of European economic and ecological hegemony in the tropics Beginning as buyers in the tropical ports of the Atlantic and Pacific they evolved into land speculators controlling and managing the areas where

tropical crops were grown for carefully fostered consumer markets at home As corporate agro industry emerged the speculators took direct control of the ecological destinies of many tropical lands Supported by the U S government s diplomatic and military protection they migrated and built private empires in the Caribbean Central and South America the Pacific Southeast Asia and West Africa Yankee investors and plantation managers mobilized engineers agronomists and loggers to undertake what they called the Conquest of the Tropics claiming to bring civilization to benighted peoples and cultivation to unproductive nature In competitive cooperation with local landed and political elites they not only cleared natural forests but also displaced multicrop tribal and peasant lands with monocrop export plantations rooted in private property regimes This book is a rich history of the transformation of the tropics in modern times pointing ultimately to the declining biodiversity that has resulted from the domestication of widely varied natural systems Richard P Tucker graphically illustrates his study with six major crops each a virtual empire in itself sugar bananas coffee rubber beef and timber He concludes that as long as corporate dominated free trade is ascendant paying little heed to its long term ecological consequences the health of the tropical world is gravely endangered Global Environmental Risk Jeanne X.
