The ninth volume of this series features reviews that cover the following topics related to the treatment of a different CNS disorders related diseases and basic neuropharmacology research: Integrating imaging and microdialysis into systems neuropharmacology Depression heterogeneity and the potential of a transdiagnostic and dimensional approach to identify biologically relevant phenotypes CAR T cells in brain tumors and autoimmune diseases from basics to the clinic Revaluation of thyrotropin releasing hormone and its mimetics as candidates for treating a wide range of neurological and psychiatric disorders Natural BACE1 inhibitors promising drugs for the management of Alzheimer's disease The possibilities of safe lithium therapy in the treatment of neurological and psychoemotional disorders Pharmacotherapy of multiple sclerosis and treatment strategies

Cognitive Neurology Stefano Cappa, Jubin Abutaleb, Jean-Francois Demonet, Paul Fletcher, Peter Garrard, 2008-02-28

The study of patients affected by disorders of the central nervous system is one of the crucial research methods for investigating the organization of cognitive functions in the brain. However, many clinicians remain unaware of the significant advances that have taken place in the field of cognitive neuroscience in the last decades. This book provides an introduction to the cognitive and behavioural aspects of the clinical practice of neurology. Most of the contributors to this book combine an active clinical practice with a leading role in their respective research area and have provided concise summaries of the theoretical advances which they consider as potentially relevant for the clinical evaluation and treatment of patients. This general approach has led to a format which is different from the many textbooks of neuropsychology that have appeared in the last few years. The organization of the material follows the main issues of diagnostic evaluation clinical presentation and management. As a consequence, the book deals not only with the classical neuropsychological syndromes associated with stroke and degenerative dementias but also with other common clinical conditions such as multiple sclerosis head injury epilepsy and psychiatric disorders which are often neglected in neuropsychology textbooks. Cognitive Neurology will be essential for neurologists in training who want to understand how the observations they make everyday in the clinic relate to

the expanding knowledge about the organization of cognition and emotion in the human brain It will also be of interest to psychologists and cognitive neuroscientists speech and language clinicians and rehabilitation specialists and psychiatrists

Challenging the Functional Connectivity Disruption in Neurodegenerative Diseases: New

Therapeutic Perspectives through Non-Invasive Neuromodulation and Cutting-Edge Technologies Giancarlo Zito, Takashi Hanakawa, Luca Berdondini, Lorenzo Masia, Lorenzo Natale, 2018-10-05 The neurorehabilitation field is increasingly focused on understanding how to efficiently revert the effects that acute i.e. stroke or traumatic brain injury or chronic i.e. neurodegenerative diseases insults play either on small or large scale networks encompassing motor sensory and cognitive domains The link between the disrupted neuronal pulse generators and their effectors is being re shaped through a wide scenario that embraces biorobotics robot aided rehabilitation non invasive neurostimulation nanoprosthesis and neuroengineering For the past decade and at an amazing speed large investments and efforts allowed enthusiastic and only apparently heterogeneous researchers to borrow theories from neurophysiology pharmacology physics and quantum mechanics in order to generate together highly sophisticated tools that restore resemble or even substitute the basic biological architecture The idea of actually reverting weakened functions and or replacing the faulty parts either of the human body or the central and peripheral nervous system is becoming a new reality opening a fascinating era in this field In this Research Topic several researchers showed how the above principles became reality from theory to the bedside of patients providing full explanations of the whole mechanistic processes and how they were implemented up to the final stage

Magnetic Resonance Spectroscopy of Degenerative Brain Diseases Gülin Öz, 2016-07-27 The proposed book will act as a guide for scientists and clinicians to the unique information that MRS can provide It will be a comprehensive overview of clinical and pre clinical MRS applications and potential clinical utility of MRS biomarkers in degenerative brain diseases from leading experts in the field MRS has proven to be a powerful complementary tool to MRI for the diagnosis and monitoring of disease progression and response to treatment because it can detect changes in cell density cell type and biochemical composition not just structural changes As the population in the developed world continues to age neuroimaging for diagnosis prognosis and therapy monitoring of neurodegenerative diseases becomes increasingly important and there has been a recent surge of clinical and pre clinical applications of MRS indicating that this technique can provide robust and non invasive biomarkers of degeneration
