Multiple Sclerosis Through History And Human Life:

Multiple Sclerosis Through History and Human Life Richard M. Swiderski, 1998 Though there are suggestions of earlier cases multiple sclerosis first came to notice in the early 1800s interest then dissolved into case histories and tissue samples for a hundred years Believed to affect around 7 of every 1 000 individuals in the United States the neurological disease multiple sclerosis can damage nerve tissue destroy muscles cause blindness and take away the ability to walk As the awareness of MS has increased the desire to find a cure has become an organized cause Funds for research have increased significantly This work provides an historical overview of MS and those who have lived with and died from it as well as medical treatments prescribed throughout the known history of the disease It includes a listing of autobiographies biographies novels videos studies and films that concern multiple sclerosis as well as a list of attempted treatments

Multiple Sclerosis Q & A Beth Ann Hill, 2003-11-10 An insightful informative and empathic resource for learning to live well with multiple sclerosis This comprehensive yet accessible work provides authoritative and reassuring answers to the many questions that overwhelm those undergoing testing and treatment for multiple sclerosis It discusses traditional and complementary therapies for MS explains medical terminology and diagnostics and compassionately addresses the lifestyle changes many patients face while learning to manage this chronic and potentially debilitating disorder

Multiple Sclerosis T. Jock Murray, 2004-12-01 Multiple Sclerosis The History of a Disease won a 2005 ForeWord Book of the Year Silver Medal The basic facts about multiple sclerosis are well known it is the most common neurologic disease of young adults usually beginning with episodic attacks of neurologic symptoms then entering a progressive phase some years later Its onset has an average age of 30 and occurs in about 1 in 500 individuals of European ancestry living primarily in temperate climates There appears to be a complex interaction between a genetic predisposition and an environmental trigger that initiates the disease But these facts do not convey the impact of the disease on the people whose lives it affects In this elegantly written and comprehensive history we meet individuals who suffered with MS in the centuries before the disease had a name including blessed Lidwina of Holland who took joy from her misery believing that she was sent to accept suffering for the sins of others Augustus d Est grandson of George III and cousin of Queen Victoria whose case shows how someone with access to the best of medical care of the age was understood and managed and Heinrich Heine the great German poet who also had access to all medical services that were available but who progressed into his mattress grave in two decades aware of the loss of physical ability while still able to compose great poetry to the end From these early cases the author demonstrates how progress in diagnosing and managing multiple sclerosis has paralleled the development of medical science from the early developments in modern studies of anatomy and pathology to the framing of the disease in the nineteenth century and eventually to modern diagnosis and treatment From beginning to end Dr Murray takes us on a fascinating journey of discovery in the process showing how the evolution of our understanding of multiple sclerosis has been

part of the greater history of medical knowledge **The Neurological Patient in History** L. S. Jacyna, Stephen T. Casper, 2012 Parkinson's Alzheimer's Tourette's multiple sclerosis stroke all are neurological illnesses that create dysfunction distress and disability With their symptoms ranging from impaired movement and paralysis to hallucinations and dementia neurological patients present myriad puzzling disorders and medical challenges Throughout the nineteenth and twentieth centuries countless stories about neurological patients appeared in newspapers books medical papers and films Often the patients were romanticized indeed it was common for physicians to cast neurological patients in a grand performance allegedly giving audiences access to deep philosophical insights about the meaning of life and being Beyond these romanticized images however the neurological patient was difficult to diagnose Experiments often approached unethical realms and treatment created challenges for patients courts caregivers and even for patient advocacy organizations In this kaleidoscopic study the contributors illustrate how the neurological patient was constructed in history and came to occupy its role in Western culture Stephen T Casper is Assistant Professor in Humanities and Social Sciences at Clarkson University L Stephen Jacyna is reader in the History of Medicine and Director of the Centre for the History of Medicine at University College London *The MS Recovery Diet* Ann Sawyer, Judith Bachrach, 2007-09-20 More than half a million people live with multiple sclerosis yet conventional medicine still has little to offer patients There is no known cure and even recent breakthroughs in drug therapy do not work to control many of the symptoms or promise any degree of recovery But there is an alternative to drugs that can stop and reverse the ravaging symptoms of MS the MS Recovery Diet As this book explains there are five common food triggers that can set off the symptoms of MS dairy grains containing glutens legumes eggs and yeast Yet because MS is such a complex disease other foods play a role as culprits or aides The MS Recovery Diet explains the background science and development of this treatment in one source for the first time and shows readers how to pinpoint their specific problem foods and sensitivities It also offers more than one hundred simple recipes as well as strategies to improve digestion balance the immune system and repair the body's myelin crucial steps toward healing the body Both of the authors Ann D Sawyer and Judith E Bachrach who had been diagnosed and disabled by multiple sclerosis have experienced incredible recovery on the diet Within the first three months on this program Sawyer was able to stop the disease progression and begin to walk short distances with an even gait Bachrach whose health has been declining because of MS for thirty eight years regained feeling in her toes in one week and after one year on the diet has stopped taking all medication This book shares the treatment plan that has dramatically changed their lives and the lives of others who have discovered it With inspiring personal stories throughout it offers real help and hope for sufferers of MS *The Turbulent World of Franz Göll* Peter Fritzsche, 2011-03-21 Franz Göll was a thoroughly typical Berliner Fritzsche paints a deeply affecting portrait of a self educated man seized by an untamable impulse to record who stayed put for nearly 70 years as history thundered around him **Quicksilver** Richard M. mercury as a harmful environmental pollutant and one of the world's most dangerous elemental toxins mercury was once considered a wondrous substance capable of eradicating internal disease revolutionizing the paint and cosmetics industries and even entertaining the masses as part of amateur magic tricks and witch doctor scams This work traces the history of mercury in popular culture beginning in the early eighteenth century when Dr Thomas Dover nicknamed Dr Quicksilver began prescribing doses of raw mercury to clear out intestinal blockages and rid the body of syphilis and other diseases The author then details the role of mercury in several medical industrial and cultural applications In the fields of dentistry and vaccination mercury continues to be used as a preservative and amalgamative agent In the cosmetics industry mercury was once used as a popular skin lightener in soaps and skin creams In the early development of obstetrics and gynecology mercury was once used to stimulate conception and fetal abortion Many more uses of mercury along with many more are outlined in the work while several appendices provide translations of rare works which reference mercury

Cumulated Index to the Books, 1999 **The Cumulative Book Index**, 1999 **Making Sense of Health, Disease, and the Environment in Cross-Cultural History: The Arabic-Islamic World, China, Europe, and North America** Florence Bretelle-Establet, Marie Gaille, Mehrnaz Katouzian-Safadi, 2020-01-01 This book has been defined around three important issues the first sheds light on how people in various philosophical religious and political contexts understand the natural environment and how the relationship between the environment and the body is perceived the second focuses on the perceptions that a particular natural environment is good or bad for human health and examines the reasons behind such characterizations the third examines the promotion in history of specific practices to take advantage of the health benefits or avoid the harm caused by certain environments and also efforts made to change environments supposed to be harmful to human health The feeling and or the observation that the natural environment can have effects on human health have been and are still commonly shared throughout the world This led us to raise the issue of the links observed and believed to exist between human beings and the natural environment in a broad chronological and geographical framework In this investigation we bring the reader from ancient and late imperial China to the medieval Arab world up to medieval modern and contemporary Europe This book does not examine these relationships through the prism of the knowledge of our modern contemporary European experience which still too often leads to the feeling of totally different worlds Rather it questions protagonists who in different times and in different places have reflected on their own terms on the links between environment and health and tries to obtain a better understanding of why these links took the form they did in these precise contexts This book targets an academic readership as well as an informed audience for whom present issues of environment and health can be nourished by the reflections of the past
