## **Multiple Use Forestry In The Nordic Countries:**

Multiple-use Forestry in the Nordic Countries Metsäntutkimuslaitos,1995      **Afforestation Experience in the Nordic Countries** Finn Helles,Michael Linddal,1996 Continuous Cover Forestry in Boreal Nordic Countries Pasi Rautio,Johanna Routa,Saija Huuskonen,Emma Holmström,Jonas Cedergren,Christian Kuehne,2024-12-05 This open access book compiles the latest research on continuous cover forestry in boreal forests highlighting both the need for additional information and the exciting possibilities that this method presents Experts in the field explore topics such as forest regeneration genetic effects wood production and yield wood harvesting forest damage agents biodiversity water effects carbon cycles of forests economics forest planning methods multiple uses of forests and forest owners attitudes As the world faces increasing pressure to balance the multiple goals of forest management including raw material production carbon sequestration biodiversity and climate change adaptation it is becoming clear that different forest management methods are required Even aged forest management is well researched but continuous forest management is a newer and rapidly evolving approach that is gaining popularity in boreal forests While an overall synthesis of the subject is not yet possible this book provides an essential foundation for understanding the current state of continuous cover forestry in boreal forests With the new research data being accumulated all the time this book is an invaluable resource for researchers policymakers and forest managers who want to stay up to date on this important topic

**Social Sustainability of Forestry in Northern Europe** Marjatta Hytönen,2001 S 113 404 Papers presented at the workshop Socio economic sustainability of forestry in Petrozavodsk Russia June 2000      **Swedish Forest Policy in an International Perspective** ,1998      *Geospatial Technologies for Effective Land Governance* El-Ayachi, Moha,El Mansouri, Loubna,2018-10-12 Land as a fundamental resource in regional development provides major opportunities for farming housing urban planning and financing In order to meet the requirements of the new era every state has developed and implemented a series of policies according to its national specificities and to the international regulations and trends *Geospatial Technologies for Effective Land Governance* is a pivotal reference source that provides vital research on the application of the use of GNSS remote sensing and GIS While highlighting topics such as crop management multispectral images and irrigation this publication explores land administration encompassing both cadastral systems and land registration as well as the methods of land governance strategies This book is ideally designed for researchers agricultural professionals engineers environmentalists land developers educators students and policymakers seeking current research on land and land based conflicts in urban and rural communities      Urban Landscape Ecology Robert A. Francis,James D.A. Millington,Michael A. Chadwick,2016-04-14 The growth of cities poses ever increasing challenges for the natural environment on which they impact and depend not only within their boundaries but also in surrounding peri urban areas Landscape ecology the study of interactions across space and time between the structure and function of physical biological

and cultural components of landscapes has a pivotal role to play in identifying sustainable solutions This book brings together examples of research at the cutting edge of urban landscape ecology across multiple contexts that investigate the state maintenance and restoration of healthy and functional natural environments across urban and peri urban landscapes An explicit focus is on urban landscapes in contrast to other books which have considered urban ecosystems and ecology without specific focus on spatial connections It integrates research and perspectives from across academia public and private practitioners of urban conservation planning and design It provides a much needed summary of current thinking on how urban landscapes can provide the foundation of sustained economic growth prospering communities and personal well being

**Restoration and History** Marcus Hall,2010-02-01 Once a forest has been destroyed should one plant a new forest to emulate the old or else plant designer forests to satisfy our immediate needs Should we aim to re create forests or simply create them How does the past shed light on our environmental efforts and how does the present influence our environmental goals Can we predict the future of restoration This book explores how a consideration of time and history can improve the practice of restoration There is a past of restoration as well as past assumptions about restoration and such assumptions have political and social implications Governments around the world are willing to spend billions on restoration projects in the Everglades along the Rhine River in the South China Sea without acknowledging that former generations have already wrestled with repairing damaged ecosystems that there have been many kinds of former ecosystems and that there are many former ways of understanding such systems This book aims to put the dimension of time back into our understanding of environmental efforts Historic ecosystems can serve as models for our restorative efforts if we can just describe such ecosystems What conditions should be brought back and do such conditions represent new natures or better pasts A collective answer is given in these pages and it is not a unified answer *Outdoor Learning Research* Sue

Waite,2020-06-09 The term outdoor learning covers many forms of practice outside the classroom including Forest School and outdoor play Outdoor learning has been rapidly growing as a topic of interest for educators and parents over the last ten years and research published in this field is also increasing Despite the fact that we are inextricably part of the natural world there is concern that contemporary children have become disconnected from nature and that their opportunities to access natural environments are declining Given compelling evidence that time spent in natural places has multiple benefits for human health and wellbeing and pro environmental behaviour Bourn et al 2016 there is an impetus to find ways to increase children s exposure to and attachment to nature through their education The chapters in this book were originally peer reviewed articles published in Education 3 13 International Journal of Primary Elementary and Early Years Education They are amongst the most popular in the journal reflecting the demand for more evidence of outcomes and high quality information about how best to implement outdoor learning for children in this age group The authors report qualitative and quantitative studies and consider implications of the findings for children and their development and for the integration or

not of natural environment contexts within school practices Gathering this body of evidence together in a single volume enables important messages about outdoor learning s various purposes processes and outcomes to be more readily accessed by practitioners policy makers and researchers Increased biomass harvesting for bioenergy ,2009 *Wild Species as Commodities* Curtis Freese,2012-06-22 In recent years some policymakers and conservationists have argued that natural resources will be protected only if economic benefits accrue to those who are responsible for caring for the resources Such commercial consumptive use of wild species CCU provides an economically viable alternative to more ecologically destructive land uses and could help accomplish the overall goals of biodiversity conservation Yet many questions remain Will the harvest of wild species be sustainable Will habitats be protected What tradeoffs are implied for the populations and ecosystems under management While this debate goes on researchers and managers are confronting an array of real world problems in managing harvested populations of wild species *Wild Species as Commodities* presents a balanced scientifically rigorous consideration of the link between CCU and biodiversity conservation The outgrowth of a four year World Wildlife Fund study the book is both a synthesis of findings and a practical guide Topics examined include forestry fisheries sport hunting and nontimber forest products the economics of wild species use social and institutional frameworks required for sustainability ecological impacts biodiversity consequences of ecosystem specialization conservation benefits of wild species use management principles and guideline *Wild Species as Commodities* provides a primer on the CCU biodiversity link and an interdisciplinary analysis of the major economic social and ecological factors involved along with guidelines for incorporating biodiversity conservation into commercial harvesting programs It is a highly accessible source of information concepts and management approaches for professionals in resource management and wildlife conservation and academics in conservation biology environmental and ecological economics and environmental studies Frontiers in Nature-based Tourism Peter Fredman,Liisa Tyrväinen,2014-01-02 Nature has been a key attraction factor for tourism in the Nordic countries for decades The demand for nature based tourism has steadily grown and is one of the most rapidly expanding sectors within tourism across Europe and elsewhere This demand has created opportunities for nature based tourism to develop as an economic diversification tool within regions rich in natural amenities But nature based tourism is not only about tourism businesses and tourists visiting nature The natural environment as a basis for tourism involves many challenges related to local communities public access nature protection and the management of natural resources This book covers a broad set of topics in contemporary nature based tourism from Finland Iceland Norway and Sweden Areas discussed are innovation fishing rights and supply of angling recreation experience preferences national park attractions the cultural clash between established outdoor recreational use and new tourism activities the Right of Public Access as opportunity and obstacle preferences of tourism landscapes controversies around wilderness development management of hiking trails eco tourism certification and financing of recreational infrastructure This book was published as a special issue of the

Scandinavian Journal of Hospitality and Tourism      **The Future Use of Nordic Forests** Erik Westholm, Karin Beland Lindahl, Florian Kraxner, 2015-02-16 Diverse as they are in their histories and in the organization of their forest sectors most Nordic countries have this in common their economies and cultures are substantially based on the utilization of various forest resources This book explores Nordic forest futures and presents research results that form part of a scientific foundation for considering how to balance the functions of forests It is particularly concerned with global trends that may affect the future use of boreal forests Chapters investigate inter alia the growing world population and the expected economic growth in countries with huge populations and assess the resulting pressure on all land based resources Authors examine the urgent need for solutions to the energy crisis consider worrying climate scenarios and provide a global outlook on bioenergy futures Readers will discover how these developments will and must influence long term strategic decisions on the future use of Nordic forests The challenges and possible responses for future forest governance and forestry issues emerge as the chapters go on to consider the multiple pressures in particular on the Swedish Forestry Model among other themes By bringing together a distinguished group of internationally renowned scientists representing a diverse set of disciplines covering political science geography rural development forest economics history and geo sciences this book constitutes an exceptionally profound and thoughtful futures study Alexander Buck Executive Director International Union of Forest Research Organizations IUFRO      *Ecosystems of Disturbed Ground* L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation      **Landscape experiences as a cultural ecosystem service in a Nordic context** Lindhjem, Henrik, Reinvang, Rasmus, Zandersen, Marianne, 2015-08-19 Cultural ecosystem services in the form of experiences derived

from landscapes are potentially important but often overlooked Given the large and unprecedented landscape changes many of the Nordic countries are undergoing there is a need to find ways of including people s preferences and the value of landscape impacts in policy assessments and decision making processes The project aim has been to synthesize knowledge about the magnitude and value of landscape experiences and investigate current practices and examples of how landscape impacts are incorporated or not in policy assessments and decision making contexts in the Nordics The literature demonstrates potentially high unaccounted welfare loss from landscape change We find clear weaknesses in current practices that a second phase will try to address The project was carried out by Vista Analysis in Oslo and Department of Environmental Science at Aarhus University from 2014 15

**Urban Forests and Trees** Cecil C. Konijnendijk, Kjell Nilsson, Thomas B. Randrup, Jasper Schipperijn, 2005-12-16 This multidisciplinary book covers all aspects of planning designing establishing and managing forests and trees and forests in and near urban areas with chapters by experts in forestry horticulture landscape ecology landscape architecture and even plant pathology Beginning with historical and conceptual basics the coverage includes policy design implementation and management of forestry for urban populations

**The Rural** Richard Munton, 2017-05-15 The rural has long been regarded as an important site of geographical inquiry even if our understanding of it has not always been treated as conceptually different from the urban That said rural research has pursued a number of distinct empirical agendas ranging from the operation and impacts of agribusiness to local resistance to global food supply chains to differing representations of the rural In doing so rural geographers have critically examined the relevance and significance of ideas drawn from numerous traditions including political economy ecological modernization and cultural theory amending them as appropriate in their search to understand the nature and trajectory of rural areas Up until the 1980s attention remained largely focused upon agriculture as the primary land use but increasingly new forms of rural consumption housing recreation nature conservation have taken centre stage as the primacy of local agricultures has been undermined by reduced state protection and new rural

populations which have migrated out from the city More recently research has been dominated by the cultural turn with particular emphases upon society nature relations interpretations of landscape marginalised others and analyses of the relations between representation and practice In the last decade a more holistic view of the rural bringing together different aspects of the two previous themes has emerged through more politically oriented studies of rural governance concerned with the functioning of interest groups participation protest and the allocation and management of resources The volume is thus structured into three sections concerned with agriculture and food the rural and rural governance The great majority of the selected papers combine both empirical material often highly informative case studies and important conceptual arguments about change in the rural condition that can be linked to ideas being employed elsewhere in Geography and the Social Sciences more generally These critical reflections have been drawn very largely from research conducted in advanced economies which at least provide some commonality of experience allowing the transfer of ideas between what otherwise might be seen as very differing geographical contexts
