Survey Research in the Social Sciences Charles Y. Glock, John Bennett, 1967-12-31 Survey research was for a long time thought of primarily as a sociological tool It is relatively recently that this research method has been adopted by other social sciences and related professional disciplines The amount and quality of its use however vary considerably from field to field This volume describes the elementary logic of survey design and analysis and provides for each discipline an evaluation of how survey research has been used and conceivably may be used to deal with the central problems of each field *Longitudinal Data Analysis* Jason Newsom, Richard N. Jones, Scott M. Hofer, 2013-06-19 This book provides accessible treatment to state of the art approaches to analyzing longitudinal studies Comprehensive coverage of the most popular analysis tools allows readers to pick and choose the techniques that best fit their research The analyses are illustrated with examples from major longitudinal data sets including practical information about their content and design Illustrations from popular software packages offer tips on how to interpret the results Each chapter features suggested readings for additional study and a list of articles that further illustrate how to implement the analysis and report the results Syntax examples for several software packages for each of the chapter examples are provided at www.psypress.com/longitudinal-data-analysis Although many of the examples address health or social science questions related to aging readers from other disciplines will find the analyses relevant to their work In addition to demonstrating statistical analysis of longitudinal data the book shows how to interpret and analyze the results within the context of the research design The methods covered in this book are applicable to a range of applied problems including short to long term longitudinal studies using a range of sample sizes The book provides non technical practical introductions to the concepts and issues relevant to longitudinal analysis Topics include use of publicly available data sets weighting and adjusting for complex sampling designs with longitudinal studies missing data and attrition measurement issues related to longitudinal research the use of ANOVA and regression for average change over time mediation analysis growth curve models basic and advanced structural equation models and survival analysis An ideal supplement for graduate level courses on data analysis and or longitudinal modeling taught in psychology gerontology public health human development family studies medicine

Discovering Statistics Using SPSS Andy Field, 2009-01-21 In this brilliant new edition Andy Field has introduced important new introductory material on statistics that the student will need and was missing at least in the first edition This book is the best blend that I know of a textbook in statistics and a manual on SPSS It is a balanced composite of both topics using SPSS to illustrate important statistical material and through graphics to make visible important approaches to data analysis There are many places in the book where I had to laugh and that's saying a lot for a book on statistics His excellent style engages the reader and makes reading about statistics fun David C Howell Professor Emeritus University of Vermont USA This award winning text now fully updated with SPSS Statistics is the only book on statistics that you will need Fully revised and restructured this new edition is even more accessible as it now takes students through from introductory to advanced level concepts all the while grounding knowledge through the use of SPSS Statistics Andy Field's humorous and self-deprecating style and the book's host of characters make the journey entertaining as well as educational While still providing a very comprehensive collection of statistical methods tests and procedures and packed with examples and self-assessment tests to reinforce knowledge the new edition now also offers a more gentle introduction to basic level concepts and methods for beginners new textbook features to make the book more user friendly for those learning about more advanced concepts encouraging critical thinking a brand new full colour design making it easy for students to navigate between topics and to understand how to use the latest version of SPSS Statistics both real world the bizarre and the wonderful and invented examples illustrate the concepts and make the techniques come alive for students an additional chapter on multilevel modelling for advanced level students reinforced binding to make the book easier to handle at a computer workstation The book also includes access to a brand new and improved companion Website bursting with features including animated SPSS walk through videos clearly demonstrating how to use the latest SPSS Statistics modules self-marking multiple choice questions data sets for psychology business and management and health sciences a flash card glossary for testing knowledge of key concepts access to support material from SAGE study skills books Statistics lecturers are also provided with a whole range of resources and teaching aids including the test bank over 300 multiple choice questions ready to upload to WebCT Blackboard or other virtual learning environments charts and diagrams in electronic format for inclusion in lecture slides PowerPoint slides written by the author to accompany chapters of the text

Regression Analysis in Medical Research Ton J. Cleophas, Aeilko H. Zwinderman, 2018-01-29 This edition is a pretty complete textbook and tutorial for medical and health care students as well as a recollection update bench and help desk for professionals Novel approaches already applied in published clinical research will be addressed matrix analyses alpha spending gate keeping kriging interval censored regressions causality regressions canonical regressions quasi likelihood regressions novel non parametric regressions Each chapter can be studied as a stand alone and covers one field in the fast

growing world of regression analyses The authors as professors in statistics and machine learning at European universities are worried that their students find regression analyses harder than any other methodology in statistics This is serious because almost all of the novel methodologies in current data mining and data analysis include elements of regression analysis It is the main incentive for writing this 28 chapter edition consistent of 28 major fields of regression analysis their condensed maths their applications in medical and health research as published so far step by step analyses for self assessment conclusion and reference sections Traditional regression analysis is adequate for epidemiology but lacks the precision required for clinical investigations However in the past two decades modern regression methods have proven to be much more precise And so it is time that a book described regression analyses for clinicians The current edition is the first to do so It is written for a non mathematical readership Self assessment data files are provided through Springer s Extras Online

Time Use Research in the Social Sciences Wendy E. Pentland, M. Powell Lawton, Andrew S. Harvey, Mary Ann McColl, 2007-05-08 Despite the fact that for most of us time is a central focus of our lives the examination of what we do with our time and why has received limited attention as a method for understanding human behavior in the social sciences Humans view and use of time shows tremendous variation including across cultures and with age lifestyle and gender For many of us a sense of time is ever present We speak of time as a commodity a resource an ally an enemy and a gift It maybe on our side on our hands with us or against us We perceive it to change speeds dragging vs flying vs standing still and lest it get away on us we attempt to harness and control it with clocks schedules and deadlines

We describe our use of time in a myriad of ways we spend it save it waste it kill it give it take it and grab it The impetus for this book grew from a three day research symposium where established time use researchers from a variety of disciplines from Canada the United States Finland Australia and New Zealand gathered together to merge their knowledge and resources to collaborate in examining the relationship between human time utilization and health and we being We gratefully acknowledge the financial support for the symposium received from the Government of Canada's Program for International Research Linkages and M Powell Lawton without whose support and encouragement this book would likely not exist
