**Applied Multivariate Statistics for the Social Sciences** Keenan A. Pituch, James P. Stevens, 2015-12-07 Now in its 6th edition the authoritative textbook *Applied Multivariate Statistics for the Social Sciences* continues to provide advanced students with a practical and conceptual understanding of statistical procedures through examples and data sets from actual research studies. With the added expertise of co author Keenan Pituch University of Texas Austin this 6th edition retains many key features of the previous editions including its breadth and depth of coverage a review chapter on matrix algebra applied coverage of MANOVA and emphasis on statistical power. In this new edition the authors continue to provide practical guidelines for checking the data assessing assumptions interpreting and reporting the results to help students analyze data from their own research confidently and professionally. Features new to this edition include NEW chapter on Logistic Regression Ch 11 that helps readers understand and use this very flexible and widely used procedure NEW chapter on Multivariate Multilevel Modeling Ch 14 that helps readers understand the benefits of this newer procedure and how it can be used in conventional and multilevel settings NEW Example Results Section write ups that illustrate how results should be presented in research papers and journal articles NEW coverage of missing data Ch 1 to help students understand and address problems associated with incomplete data Completely re written chapters on Exploratory Factor Analysis Ch 9 Hierarchical Linear Modeling Ch 13 and Structural Equation Modeling Ch 16 with increased focus on understanding models and interpreting results NEW analysis summaries inclusion of more syntax explanations and reduction in the number of SPSS SAS dialogue boxes to guide students through data analysis in a more streamlined and direct approach Updated syntax to reflect newest versions of IBM SPSS 21 SAS 9.3 A free online resources site at [www.routledge.com/9780415836661](http://www.routledge.com/9780415836661) with data sets and syntax from the text additional data sets and instructor's resources including PowerPoint lecture slides for select chapters a conversion guide for 5th edition adopters and answers to exercises. Ideal for advanced graduate level courses in education psychology and other social sciences in which multivariate statistics advanced statistics or quantitative techniques courses are taught this book also appeals to practicing researchers as a valuable reference. Pre requisites include a course on factorial ANOVA and covariance however a working knowledge of matrix algebra is not assumed.

**Applied Multivariate Statistics for the Social Sciences, Fifth Edition** James P. Stevens, 2012-11-12 This best selling text is written for those who use rather than develop statistical methods. Dr Stevens focuses on a conceptual understanding of the material rather than on proving results. Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review. Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results. In addition to demonstrating how to use these packages the author stresses the importance of checking the data assessing the assumptions and ensuring adequate sample size by providing guidelines so that the results can be generalized. The book is noted for its extensive applied coverage of MANOVA its emphasis on statistical power and

numerous exercises including answers to half The new edition features New chapters on Hierarchical Linear Modeling Ch 15 and Structural Equation Modeling Ch 16 New exercises that feature recent journal articles to demonstrate the actual use of multiple regression Ch 3 MANOVA Ch 5 and repeated measures Ch 13 A new appendix on the analysis of correlated observations Ch 6 Expanded discussions on obtaining non orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log linear analysis in 4 or 5 way designs Updated versions of SPSS 15 0 and SAS 8 0 are used throughout the text and introduced in chapter 1 A book website with data sets and more Ideal for courses on multivariate statistics found in psychology education sociology and business departments the book also appeals to practicing researchers with little or no training in multivariate methods Prerequisites include a course on factorial ANOVA and covariance Working knowledge of matrix algebra is not assumed

*Surveys In Social Research* David De Vaus, David de Vaus, 2013-12-17 David de Vaus classic text Surveys in Social Research provides clear advice on how to plan conduct and analyse social surveys It emphasises the links between theory and research the logic and interpretation of statistics and the practices of social research This sixth edition has been completely revised and updated and contains new examples data and extensive lists of web resources As well as explaining how to conduct good surveys de Vaus shows how to become a critical consumer of research He argues that the logic of surveys and statistics is simply an extension of the logic we use in everyday life analysis however requires creativity and imagination rather than the application of sterile mechanical procedures The prime goal of research should be to gain accurate understanding and as a researcher use methods and techniques which enhance understanding De Vaus advocates researchers use the method rather than letting the method use you Surveys in Social Research is essential reading for students and researchers working with surveys It assumes no background in statistical analysis and gives you the tools you

need to come to grips with this often challenging field of work
