Muon-Catalyzed Fusion and Fusion with Polarized Nuclei B. Brunelli, G.G. Leotta, 2013-11-11 The International School of Fusion Reactor Technology started its courses 15 years ago and since then has mantained a biennial pace Generally each course has developed the subject which was announced in advance at the closing of the previous course The subject to which the present proceedings refer was chosen in violation of that rule so as to satisfy the recent and diffuse interest in cold fusion among the main European laboratories involved in controlled thermonuclear research CTR In the second half of 1986 we started to prepare a workshop aimed at assessing the state of the art and possibly of the perspectives of muon catalyzed fusion Research in this field has recently produced exciting experimental results open to important practical applications We thought it worthwhile to consider also the beneficial effects and problems of the polarization of the nuclei in both cold and thermonuclear fusion In preparing the 8th Course on Fusion Reactor Technology it was necessary to abandon the traditional course format because the influence of the workshop procedure was inevitable the participants were roughly equally divided into experts in cold fusion and experts in thermonuclear fusion The course had largely an interdisciplinary character as many disciplines were involved atomic and molecular physics nuclear physics accelerator technology system analysis etc Plasma physics was excluded with a sigh of relief from the experts in thermonuclear fusion Muon-Catalyzed Fusion and Fusion with Polarized Nuclei B. Factor in Muon Catalyzed Fusion and the Other Aspect of this Fusion Process, 1986 The effect of resonance nuclear

fusion reaction on the initial muon sticking factor is formulated The analysis shows that it is very sensitive to the resonance parameter and the factor calculated using the molecular wave function obtained by the Diffusion Monte Carlo method is 0 1 0 01 for the presently evaluated resonance parameter The analysis of the multistep excitation effect on the reactivation factor shows that the effect is not so large and the analysis of muonic x ray spectra of mu 3He from P mu d and d mu d fusions is in good agreement with the values measured by Bossy et al **Muon Catalyzed Fusion**,1992 *Muon Catalyzed Fusion at Very Low Temperature : a New Target System* F.
