Participation And The Quality Of Environmental Decision Making:

Participation and the Quality of Environmental Decision Making F. Coenen, D. Huitema, Laurence J. O'Toole Jr., 2012-12-06 It is clear that our society must become a more sustainable one To that end we must change both our production and our consumption patterns Some argue that this implies the abolition of democratic processes and thus of citizens participation in environmental policy Others argue the opposite the only way to avoid impending environmental disaster is by engaging in common deliberation and contemplation Is participation then a negative force or not This volume is one of the first coordinated attempts to study the relationship between democratic participatory forms of decision making and the quality of environmental decisions The central question is how can the normatively desirable practice of participatory decision making be combined with an effective approach to environmental issues Guided by a theoretical introduction by the editors the 15 chapters deal with topics ranging from the scale of environmental problems local agenda 21 infrastructural decisions strategic planning to environmental policy in developing countries Three chapters are devoted to each of these broad themes Each presents either a theoretical or an empirical argument about the central research question shedding light on such issues as the measurement of decision quality participation techniques and the link between participation and decision quality drawing on experience gained in Europe North and South America Asia and Africa The introductions to the individual parts of the book have been collectively written by the contributors who represent a range of professional disciplines including political science public policy and planning

Public Participation and Better Environmental Decisions Frans H. J. M. Coenen, 2008-12-12 Public Participation and Better Environmental Decisions is about a specific promise that participation holds for environmental decision making Many of the arguments for public participation in international environmental policy documents are functional that is to say they see public participation as a means to an end Sound solutions to environmental problems require participation beyond experts and political elites Neglecting information from the public leads to legitimacy questions and potential conflicts There is a discourse in the literature and in policy practice as to whether decision making improves in quality as additional relevant information by the public is considered The promise that public participation holds has to be weighed against the limitations of public participation in terms of costs and interest conflicts The question that Public Participation and Better Environmental Decisions seeks to answer for academics planners and civil servants in all environmental relevant policy fields is What restricts and what enables information to hold the promise that public participation lead to better environmental decision making and better outcomes Public Participation in Environmental Assessment and Decision Making National Research Council, Division of Behavioral and Social Sciences and Education, Committee on the Human Dimensions of Global Change, Panel on Public Participation in Environmental Assessment and Decision Making, 2008-11-07 Federal agencies have taken steps to include the public in a wide range of environmental decisions Although some form of public participation is often required by law agencies usually

have broad discretion about the extent of that involvement Approaches vary widely from holding public information gathering meetings to forming advisory groups to actively including citizens in making and implementing decisions Proponents of public participation argue that those who must live with the outcome of an environmental decision should have some influence on it Critics maintain that public participation slows decision making and can lower its quality by including people unfamiliar with the science involved This book concludes that when done correctly public participation improves the quality of federal agencies decisions about the environment Well managed public involvement also increases the legitimacy of decisions in the eyes of those affected by them which makes it more likely that the decisions will be implemented effectively This book recommends that agencies recognize public participation as valuable to their objectives not just as a formality required by the law It details principles and approaches agencies can use to successfully involve the public

Public Participation and Better Environmental Decisions Frans H. J. M. Coenen, 2010-11-16 Public Participation and Better Environmental Decisions is about a specific promise that participation holds for environmental decision making Many of the arguments for public participation in inter national environmental policy documents are functional that is to say they see public participation as a means to an end Sound solutions to environmental problems require participation beyond experts and political elites Neglecting information from the public leads to legitimacy questions and potential conflicts There is a discourse in the literature and in policy practice as to whether decision making improves in quality as additional relevant information by the public is considered The promise that public participation holds has to be weighed against the limitations of public participation in terms of costs and interest conflicts The question that Public Participation and Better Environmental Decisions seeks to answer for academics planners and civil servants in all environmental relevant policy fields is What restricts and what enables information to hold the promise that public participation lead to better environmental decision making and better outcomes

Democracy in Practice Thomas C. Beierle, Jerry Cayford, 2002 Based on data from 239 case studies covering three decades this study evaluates the success of public participation and identifies the contextual factors that lead to it The authors argue that public participation has led to better environmental policy and has helped resolve the mistrust that often accompanies environmental controversies They specifically advocate intensive problem solving processes and identify participant motivation and agency responsiveness as key factors for success Annotation copyrighted by Book News Inc Portland OR

GIS for Group Decision Making Piotr Jankowski, 2001-01-18 In today s society it is very common for decisions that influence us all to be made by a combination of interested parties all with their own agenda In this instance how can we be sure that the decision is the correct one not just decided by the group with the most political influence or most money Such groups have now become fundamental deci

The Challenge of Organising and Implementing Corporate Social Responsibility J. Jonker, M. de Witte, 2006-06-20 Corporate Social Responsibility CSR often emerges at the boundary of the business enterprise expressed in changing relations with stakeholders and society

This book explores the theoretical and practical aspects of implementing CSR within organizations. It captures implementation perspectives and unravels consequences of implementing CSR. **Negotiating Environmental Change** F. Berkhout, 2003-01-01. The ESRC GEC programme has made a major contribution in terms of environmental social science research. The chapters in this book provide incisive detailed and reflective critiques of the development of knowledge over the last ten years and provide powerful and important messages about the challenges presented by the complex relationship between environmental and social change. The book should be essential reading for all researchers and also for all policymakers who are grappling with questions about how to respond to environment society controversies. Judith Petts, Birmingham University UK and Member of the Royal Commission on Environmental Pollution. Global environmental change will be with us forever. But how it happens in the future and with what effect on the planet and its peoples depends to a large extent on how the international agreements, national politics and local actions play out. This collection provides the most comprehensive assessment yet of these critical interconnections and reveals how social scientists are making an invaluable contribution to the creation of more science and just livelihoods in a future world. Tim O'Riordan, University of East Anglia UK. An aphrodisiac to the tepid response of positivist social science. People are not merely actors, perpetrators and victims in an environmental drama. The critical social theorists in this book constructively show us how people are improvising the stage and the script as we update our understanding of nature, what constitutes a good life and our individual and collective options. Richard B. Norgaard, University of California, Berkeley US. *Negotiating Environmental Change* is a child of the ESRC's Global Environmental Change Programme, by far the biggest piece of work by social scientists in the United Kingdom during the 1990s. At the beginning of the twenty-first century, the balance sheet needs to be drawn up: what do our policies, insights and values owe to the collaborative efforts of social scientists? This book suggests that ideas and approaches that were conceived at a time when the Ozone Hole, Global Warming and Biodiversity Losses were beginning to resonate in academic and policy circles have now entered the British and European psyche. The challenge of forward thinking in the twenty-first century, in which the environment is central to most of the issues that concern social science, is to demonstrate that the environment is not a separate territory. Environmental thinking and practice affects us in various guises: governance and democracy, business and management, risk and everyday consumption. The substance of this book, *Negotiating Environmental Change*, makes clear the contribution that new thinking is making to problems that were not looked upon as environmental a decade ago but which we now see as being at the forefront of global research and policy agendas. Michael Redclift, King's College London UK. Major advances have been made recently in environmental social science, but the context and importance of this research has also changed. Social and natural science studies of the environment have begun to interact more closely with each other and many analysts now agree that an understanding of environmental problems often depends on an understanding of the attitudes and behaviour of people and organisations. Moreover, policy and public debates have also shown that many

assumptions that underpin arguments about sustainable development need to be reconsidered and re framed This book by leading researchers presents a critical review of debates in environmental social science over the past decade Three broad areas are covered in ten chapters the problems of scientific uncertainty and its role in shaping environmental policy and decisions the development of institutional frameworks for governing natural resources and the link between economic and technological change and the environment The book begins with an overview essay exam The Adaptiveness of IWRM Jos G. Timmerman, Claudia Pahl-Wostl, Jorn Moltgen, 2008-04-14 The Adaptiveness of IWRM provides new insights and knowledge on the challenges and solutions that current water management faces in a situation of complexity and uncertainty Drawing on the available results from a wide range of European research projects under several framework programmes the book provides an overview of the state of the art in European research on Integrated Water Resources Management on the topics of Participation Transboundary regimes Economics Vulnerability Climate change Advanced monitoring Spatial planning and the Social dimensions of water management The achievements of EU research projects are considered in view of the extent to which IWRM responds to the current complexity and uncertainty water management is facing These achievements are positioned in a wider context of worldwide developments in the respective topics which account for the future challenges From this the book concludes with the required focus of European research in the near future and promotes the concept of Adaptive Water Management as the preferred direction for the development of IWRM The book presents the achievements of European IWRM research on a range of water management topics and offers conclusions and recommendations for research foci that will be invaluable to water managers policy makers and academic researchers working in the field of IWRM ,

Climate Change Solutions Diana Stuart, Ryan Gunderson, Brian Petersen, 2020-07-17 Climate Change Solutions represents an application of critical theory to examine proposed solutions to climate change Drawing from Marx s negative conception of ideology the authors illustrate how ideology continues to conceal the capital climate contradiction or the fundamental incompatibility between growth dependent capitalism and effectively and justly mitigating climate change Dominant solutions to climate change that offer minor changes to the current system fail to address this contradiction However alternatives like degrowth involve a shift in priorities and power relations and can offer new systemic arrangements that confront and move beyond the capital climate contradiction While there are clear barriers to a systemic transition that prioritizes social and ecological well being such a transition is possible and desirable **International Encyclopedia of**

Groundwater Science and Policy, 2008. Until recently focus on groundwater mainly concerned its use as drinking water and as an important resource for industry e.g. cooling waters and agriculture irrigation. It has however become increasingly obvious that groundwater should not only be viewed as a drinking water reservoir but that it should also be protected for its environmental value. In this respect groundwater represents an important link of the hydrological cycle through the maintenance of wetlands and river flows acting as a buffer through dry periods. Hence deterioration of groundwater quality may directly affect other related aquatic and terrestrial ecosystems. The groundwater legislative framework under the EU Water Framework Directive and the newly adopted Groundwater Directive establishes criteria linked to environmental objectives which have to be met by 2015 following successive operational steps including characterisation, risk assessment, analysis of pressures and impacts, monitoring and design of programmes of measures. These milestones require that sound technical and scientific information be made accessible to water managers which is so far still not sufficiently streamlined. In this context this book describes the groundwater legislative milestones and presents series of research and development activities that aim to directly support them. It has therefore the ambition to become a vehicle liaising policy requirements and available scientific knowledge in this area.

Effective Judicial Protection and the Environmental Impact Assessment Directive in Ireland Aine Ryall, 2009-06-23. This work is concerned with enforcement of the Environmental Impact Assessment (EIA) directive in Ireland and by extension in the European Union more widely. As a case study it delves into the complex situation pertaining in Ireland. At a more general level it offers an up to date theoretically rich and critically incisive examination of the enforcement of the EIA directive in Europe with the main focus being on the role of the national courts in overseeing the correct application of the directive by the competent authorities via the judicial review process. The procedural requirements set down in the EIA directive are examined against the backdrop of the role played by the public in environmental decision making. Amendments to the directive prompted by the Aarhus Convention are explained and their impact in practice is assessed. The core elements of the concept of effective judicial

protection developed by the European Court of Justice are explored Following an analysis of the EIA case law from the Irish Superior Courts to date the work examines the extent to which Irish planning and administrative law meets the requirements of the principle of effective judicial protection and the access to justice provisions articulated in the Aarhus Convention

Tools to Aid Environmental Decision Making Virginia H. Dale, Mary R. English, 2012-11-26 Environmental decision making is like politics mostly local In fact making decisions about the environment at the subnational level in state regional and local jurisdictions is a lot like politics For resolving environmental issues demands but often resists a balance between deeply held feelings and stark confrontations among opposing views This volume describes tools that should make the decision maker's lot a bit more tolerable The authors would be the last to suggest that these decision aiding tools will somehow bring a benign order to issues that reach to people's fundamental values What they can help do is to keep the debate focused on the important issues to serve up useful options and to narrow the range of disagreement Even this is a challenging assignment Still why bother The chief reason is that the locus of environmental decision making has in the past decade or so shifted from the national to the subnational level a convenient if colorless term to denote the hurly burly of environmental controversy outside the Washington Beltway For example New England has taken a regional stand on tropospheric ozone control and California requires automotive pollution controls that some other jurisdictions have partially adopted This shift is a profound but not unexpected result of the way environmental policy has evolved since the modern environmental movement began around the late 1960s Back then the pendulum was swinging the other way

The Right of Access to Environmental Information Sean Whittaker, 2021-11-18 The book discusses the normative impact of the Aarhus Convention on how England America and China guarantees the right of access to environmental information Through this analysis the book identifies each of these jurisdictions' unique conceptualisations of the right which in turn influences the design of their respective environmental information regimes This allows these jurisdictions potentially to act as sources of legal reforms for each other to improve how the right is guaranteed via legal transplant theory challenging the normativity of the Aarhus Convention This is not to suggest that the Aarhus Convention exerts no normative influence on how the right is guaranteed there are core substantive and core procedural elements which have to be met for the right to be effectively guaranteed and the book shows that the Aarhus Convention does exert a normative influence over the procedural elements of the right

Multilevel Regulation and the EU Andreas Follesdal, Ramses A. Wessel, Jan Wouters, 2008-05-31 Rules are no longer merely made by states but increasingly by international organizations and other international bodies At the same time these rules do impact the daily life of citizens and companies as it has become increasingly difficult to draw dividing lines between international EU and domestic law This book introduces the notion of multilevel regulation as a way to study these normative processes and the interplay between different legal orders It indicates that many rules in such areas as trade financial cooperation food safety pharmaceuticals security terrorism civil

aviation environmental protection or the internet find their origin in international cooperation Apart from mapping multilevel regulation on the basis of a number of case studies the book analyses its consequences in relation to forms of legal protection and legitimacy In that respect it proposes an agenda for research to study how to cope with multilevel regulation This work offers valuable resources for researchers involved in studying the interplay between international European and domestic law For practitioners it offers background information on the ways in which many international rules come into being

Managing Facts and Feelings in Environmental Governance Lorenzo Squintani, Jan Darpö, Luc Lavrysen, Peter-Tobias Stoll, 2019 This timely book brings to the foreground the considerable tensions between the need to engage the public in the importance of environmental governance and the need of professional expertise to address the issues which arise In doing so it highlights that not only can public opinion deviate from scientific knowledge but scientific knowledge itself can be lacunose or contradicting Drawing together insights from some of the leading scholars this engaging work will provide guidance to decision makers including judges on how to govern public participation procedures and professional expertise and the role that the precautionary principle can play in this regard **Environmental Law** Stuart Bell, Donald McGillivray, Ole Pedersen, 2013-05-09 This edition includes material on environmentalism and the law international environmental law access to environmental justice noise pollution and new legislation on pollution prevention and new case law
