The Gospel Sounds Like the Witch's Spell Kiyoshi Umeya, 2022-02-10 The Gospel Sounds Like the Witch's Spell is a highly detailed ethnography about how the Jopadhola in eastern Uganda talk about interpret and cope with death illness and other misfortunes The book presents a provocative discussion that critiques the idea of the revival of witchcraft in the neo liberalised contemporary world as represented by the modernity model of witchcraft and attempts to formulate a spiderweb model that connects witchcraft to contemporary society in a more complex manner The book is a unique ethnography of the collective memory of indigenous knowledge and local historicity The author moves the reader from curse to misfortune to fortune as he plots the notion of curse as deeply embedded in the Adhola way of life He weaves between culture religion state and modernity with lived experience Did the concept of witchcraft unwittingly endear the Adhola to the Christian way of life because of the presence of the notion of curse in the Bible or make them less susceptible to the vagaries of modernity compared to their neighbours These are some of the questions that the author puts on the table in a deeply reflective manner The phenomenon of witchcraft is given an intriguing angle that invites the reader to reexamine earlier anthropological writings on the subject among African peoples

Eating on the Wild Side Nina L. Etkin, 2000-11-01 People have long used wild plants as food and medicine and for a myriad of other important cultural applications While these plants and the foraging activities associated with them have been dismissed by some observers as secondary or supplementary or even backward their contributions to human survival and well being are more significant than is often realized Eating on the Wild Side spans the history of human plant interactions to examine how wild plants are used to meet medicinal nutritional and other human needs Drawing on nonhuman primate studies evidence from prehistoric human populations and field research among contemporary peoples practicing a range of subsistence strategies the book focuses on the processes and human ecological implications of gathering semidomestication and cultivation of plants that are unfamiliar to most of us Contributions by distinguished cultural and biological anthropologists paleobotanists primatologists and ethnobiologists explore a number of issues such as the consumption of unpalatable and famine foods the comparative assessment of aboriginal diets with those of colonists and later arrivals and the apparent self treatment by sick chimpanzees with leaves shown to be pharmacologically active Collectively these articles offer a theoretical framework emphasizing the cultural evolutionary processes that transform plants from wild to domesticated with many steps in between while placing wild plant use within current discussions surrounding biodiversity and its conservation Eating on the Wild Side makes an important contribution to our understanding of the links between biology and culture describing the interface between diet medicine and natural products By showing how various societies have successfully utilized wild plants it underscores the growing concern for preserving genetic diversity as it reveals a fascinating chapter in the human ecology
