Improving the proof: Evolution of and emerging trends in impact assessment methods and approaches in agricultural development Mywish K. Maredia, Assessing impacts of public investments has long captured the interest and attention of the development community This paper presents the evolution of different methods and approaches used for ex ante appraisal monitoring project evaluation and impact assessment over the last five decades Among these tools impact assessment IA conducted retrospectively comes closest to providing the proof of development effectiveness It is defined as the systematic analysis of the significant or lasting changes in people s lives brought about by a given action or series of actions in relation to a counterfactual There are three basic types of retrospective IAs macro level IAs that focus on the contribution of developmental efforts to an impact goal aggregated at a sector or a system level micro level impact evaluations IEs concerned with estimating the average effect of an intervention on outcomes at the beneficiary level and micro level ex post impact analysis concerned with total effects of a development effort after the outputs are scaled up Ex post IAs have evolved and expanded over the decades in both breadth and depth of analysis in response to evolving development themes and methodological advancements The increased emphasis on learning from evaluations has also seen responses from both quantitative and qualitative camps of the evaluation community The paper argues that generation of robust knowledge that feeds into making developmental policies and investment decisions requires a hierarchical and cumulative approach to improving the proof through rigorous and a variety of impact assessment methods applied incrementally at the project program and system level Subjecting as many development interventions as resources allow to rigorous impact assessment based on a common framework can help build a critical body of evidence on impacts of development interventions which can then be subjected to meta analyses to help assimilate results across different studies and build a knowledge base on what works and what does not
