Chemistry of the Platinum Group Metals F.R. Hartley, 2013-10-22

The chemistry of platinum group metals is a rapidly expanding commercially important field. It is dominated by the catalytic properties of the metals. They are useful in petrochemical and general chemical plants and are becoming increasingly important as autocatalysts for pollution control. The book covers recent developments in the chemistry of the six platinum group metals namely platinum, palladium, rhodium, iridium, ruthenium and osmium. The material falls into three broad areas. Firstly the occurrence, extraction and use of the metals, especially in catalysis, electrochemistry, energy and electronics. Secondly organometallic and homogeneous catalytic chemistry and last but not least coordination chemistry including biochemistry and cancer therapy. The work is aimed at scientists in universities and in industry using any of the six platinum group metals in research. It will be useful for those studying the compounds of the metals themselves and those considering to use either the metals or their complexes and catalysts in their experimental work.

Ruthenium Oxidation Complexes William P. Griffith, 2010-11-03

Ruthenium Oxidation Complexes explores ruthenium complexes particularly those in higher oxidation states which function as useful and selective organic oxidation catalysts. Particular emphasis is placed on those systems which are of industrial significance. The preparation, properties and applications of the ruthenium complexes are described followed by a presentation of their oxidative properties and summary of the different mechanisms involved in the organic oxidations e.g. oxidations of alcohols, alkenes, arenes and alkynes, alkanes, amines, ethers, phosphines and miscellaneous substrates. Moreover, future trends and developments in the area are discussed. This monograph is aimed at inorganic, organic, industrial and catalysis chemists, especially those who wish to carry out specific organic oxidations using catalytic methods.
