Autophagy: Lower Eukaryotes and Non-Mammalian Systems, Part A, 2011-09-02 This is the companion volume to Daniel Klionsky's Autophagy Lower Eukaryotes which features the basic methods in autophagy covering yeasts and alternative fungi Klionsky is one of the leading authorities in the field He is the editor in chief of Autophagy The November 2007 issue of Nature Reviews highlighted his article Autophagy from phenomenology to molecular understanding in less than a decade He is currently editing guidelines for the field with 230 contributing authors that will publish in Autophagy Particularly in times of stress like starvation and disease higher organisms have an internal mechanism in their cells for chewing up and recycling parts of themselves The process of internal house cleaning in the cell is called autophagy literally self eating Breakthroughs in understanding the molecular basis of autophagy came after the cloning of ATG1 in yeast These ATG genes in yeast were the stepping stones to the explosion of research into the molecular analysis of autophagy in higher eukaryotes In the future this research will help to design clinical approaches that can turn on autophagy and halt tumor growth Establishes the functional roles of specific cellular proteins in selective and nonselective autophagy in mammalian cells which aides

researchers in determining why autophagy is shut down in neoplasia growth of abnormal tissue mass and turned on during bacterial invasion Includes methods to evaluate the role of autophagy in the drug induced cell death of cancer cells in culture which helps researchers design clinical approaches that can turn on autophagy and halt tumor growth Covers higher eukaryotes including lifespan in C elegans to marine organisms and bridging into the clinical aspects including autophagy in chronic myelogenous leukemia CML is one of four types of leukemia lung cancer prostate cancer and cardiac cells
