

INTRODUCTION

- Geochemical prospecting for minerals includes any method of mineral exploration based upon systematic measurement of one or more chemical properties of a naturally occurring material.

- The chemical property measured is most commonly the trace content of some element or group of elements.

The naturally occurring material may be rock, soil, gossan, glacial debris, vegetation, stream sediment, or water.

- The purpose of the measurements is the discovery of a geochemical "anomaly" or area where the chemical pattern indicates the presence of ore in the vicinity.
