Most countries in the world use the SI System International also known as the metric system units for radiation measurements in commercial and technical activities The United States in contrast uses a mix of SI and conventional units for radiation measurements despite 30 year old national and international recommendations to exclusively use SI Radiation professionals in the United States are faced with the need to understand both systems and make conversions between the two In September 2016 the National Academies of Sciences Engineering and Medicine organized a workshop to explore potential communication improvements associated with adopting the international system of units SI units for radiation measurements in the United States Participants discussed potential improvements in the effectiveness of responding to national and international radiation emergencies international experiences in adopting the exclusive use of SI units of radiation measurements and steps needed to adopt the exclusive use of SI units in the US in terms of timing implementation and ways to overcome or manage technical economic and policy barriers This publication summarizes the presentations and discussions from the workshop

Aristotelian-Thomistic Philosophy of Measure and the International System of Units (SI) Charles B. Crowley, 1996 Dealing with the metaphysical foundations of modern physical science this book demonstrates that not only is classical metaphysics not in conflict with the principles of modern experimental science but that when analogously transferred to the different divisions of modern science the metaphysical principle of unity makes intelligible all the laws of modern science This revolutionary book provides the means for reestablishing the unity of science by interpreting the whole of modern experimental science from the perspective of an analogous transfer of the metaphysical principle of unity rather than in terms of efficient causality
