Statistical Inference for Piecewise-deterministic Markov Processes Romain Azais,Florian Bouguet,2018-08-14 Piecewise deterministic Markov

processes form a class of stochastic models with a sizeable scope of applications biology insurance neuroscience networks finance Such processes are defined by a deterministic motion punctuated by random jumps at random times and offer simple yet challenging models to study Nevertheless the issue of statistical estimation of the parameters ruling the jump mechanism is far from trivial Responding to new developments in the field as well as to current research interests and needs Statistical inference for piecewise deterministic Markov processes offers a detailed and comprehensive survey of state of the art results It covers a wide range of general processes as well as applied models The present book also dwells on statistics in the context of Markov chains since piecewise deterministic Markov processes are characterized by an embedded Markov chain corresponding to the position of the process right after the jumps

Numerical Methods for Simulation and Optimization of Piecewise Deterministic Markov Processes Benoîte de Saporta,François Dufour,Huiling Zhang,2016-01-26 Mark H A Davis introduced the Piecewise Deterministic Markov Process PDMP class of stochastic hybrid models in an article in 1984 Today it is used to model a variety of complex systems in the fields of engineering economics management sciences biology Internet traffic networks and many more Yet despite this there is very little in the way of literature devoted to the development of numerical methods for PDMPs to solve problems of practical importance or the computational control of PDMPs This book therefore presents a collection of mathematical tools that have been recently developed to tackle such problems It begins by doing so through examples in several application domains such as reliability The second part is devoted to the study and simulation of expectations of functionals of PDMPs Finally the third part introduces the development of numerical techniques for optimal control problems such as stopping and impulse control problems
