Model Oriented Data Analysis:

MODA 5 - Advances in Model-Oriented Data Analysis and Experimental Design Anthony C. Atkinson, Luc Pronzato, Henry P. Wynn, 2012-12-06 This volume contains the majority of the papers presented at the 5th International Workshop on Model Oriented Data Analysis held in June 1998 This series started in March 1987 with a meeting on the Wartburg Eisenach Germany The next three meetings were in 1990 St Kyrik monastery Bulgaria 1992 Petrodvoretz St Petersburg Russia and 1995 Spetses Greece The main purpose of these workshops was to bring together leading scientists from Eastern and Western Europe for the exchange of ideas in theoretical and applied statistics with special emphasis on experimental design Now that the separation between East and West has become less rigid this dialogue has in principle become much easier However providing opportunities for this dialogue is as vital as ever MODA meetings are known for their friendly atmosphere leading to fruitful discussions and collaboration especially between young and senior scientists Indeed many long term collaborations were initiated during these events This intellectually stimulating atmosphere is achieved by limiting the number of participants to around eighty by the choice of location so that participants can live as a community and of course through the careful selection of scientific direction made by the Programme Committee

MODA4 — Advances in Model-Oriented Data Analysis Christos P. Kitsos, Werner G. Müller, 2013-06-29 This volume is the proceedings of the 4th International Workshop on Model Oriented Data Analysis This series of events originated in 1987 at a meeting in Eisenach that successfully brought together scientists from numerous countries of the East and West Now that this distinction is obsolete dialogue has been greatly facilitated providing opportunities for this dialogue however is as vital as ever The present meeting at Spetses Greece from 5th to 9th of June 1995 again assembles statisticians from all over the world as this book documents The hospitality offered by the University of Economics of Athens and the Korgialenios School made it possible to organize this workshop The editors are also grateful to Intracom Greece the Ionian Bank and the Procter Gamble Company USA for their generous support We would particularly like to mention Dr Michael Meredith who being our contact person at Procter Gamble enabled us to publish these proceedings Further thanks go to Dr Peter Schuster from Physica Verlag Heidelberg for his continuing support of the project The contributions to this volume were carefully selected from the submissions by the editors after a one stage refereeing process We would like to thank the members of the MODA committee A C Atkinson R D Cook V V Fedorov P Hackl H Lauter B Torsney LN Vuchkov H P Wynn and A A Zhigljavsky who not only defined the main topics of the workshop but also served as the referees

Reduced Rank Regression Heinz Schmidli, 2013-03-13 Reduced rank regression is widely used in statistics to model multivariate data In this monograph theoretical and data analytical approaches are developed for

the application of reduced rank regression in multivariate prediction problems For the first time both classical and Bayesian inference is discussed using recently proposed procedures such as the ECM algorithm and the Gibbs sampler All methods are motivated and illustrated by examples taken from the area of quantitative structure activity relationships QSAR

Model-Based Clustering and Classification for Data Science Charles Bouveyron, Gilles Celeux, T. Brendan Murphy, Adrian E. Raftery, 2019-07-25 Cluster analysis finds groups in data automatically Most methods have been heuristic and leave open such central questions as how many clusters are there Which method should I use How should I handle outliers Classification assigns new observations to groups given previously classified observations and also has open questions about parameter tuning robustness and uncertainty assessment This book frames cluster analysis and classification in terms of statistical models thus yielding principled estimation testing and prediction methods and sound answers to the central questions It builds the basic ideas in an accessible but rigorous way with extensive data examples and R code describes modern approaches to high dimensional data and networks and explains such recent advances as Bayesian regularization non Gaussian model based clustering cluster merging variable selection semi supervised and robust classification clustering of functional data text and images and co clustering Written for advanced undergraduates in data science as well as researchers and practitioners it assumes basic knowledge of multivariate calculus linear algebra probability and statistics

Functional Approach to Optimal Experimental Design Viatcheslav B. Melas, 2006-04-20 The present book is devoted to studying optimal experimental designs for a wide class of linear and nonlinear regression models This class includes polynomial trigonometrical rational and exponential models as well as many particular models used in ecology and microbiology As the criteria of optimality the well known D E and c criteria are implemented The main idea of the book is to study the dependence of optimal signs on values of unknown parameters and on the bounds of the design interval Such a study can be performed on the base of the Implicit Function Theorem the classical result of functional analysis The idea was first introduced in the author s paper Melas 1978 for nonlinear in parameters exponential models Recently it was developed for other models in a number of works Melas 1995 2000 2001 2004 2005 Dette Melas 2002 2003 Dette Melas Pepelyshev 2002 2003 2004b and Dette Melas Biederman 2002

The purpose of the present book is to bring together the results obtained and to develop further underlying concepts and tools The approach mentioned above will be called the functional approach Its brief description can be found in the Introduction The book contains eight chapters The first chapter introduces basic concepts and results of optimal design theory initiated mainly by J Kiefer

Optimal Measurement Methods for Distributed Parameter System Identification Dariusz

Ucinski, 2004-08-27 For dynamic distributed systems modeled by partial differential equations existing methods of sensor location in parameter estimation experiments are either limited to one dimensional spatial domains or require large investments in software systems With the expense of scanning and moving sensors optimal placement presents a critical problem

Model-Checking Based Data Retrieval Elisa Quintarelli, 2004-02-06 This book is devoted to the study of the semantics and assuring the efficient execution of database query languages where the database contains semistructured and time varying information The primary focus of the work presented is the definition of an effective graph based approach to the formalization of query languages for semistructured and temporal information as a result query execution can be reduced to searching the database for subgraphs that are similar to the given query graph and thus can be supported through bisimulation By integrating and refining graph based methods and bisimulation the author develops a powerful and flexible

paradigm The second research challenge solved is that of efficient implementation by modeling graphical queries as formulas in modal logic and interpreting database instance graphs as Kripke transition systems

Optimal Design and Related Areas in Optimization and Statistics Luc Pronzato, Anatoly Zhigljavsky, 2010-07-25 The present volume is a collective monograph devoted to applications of the optimal design theory in optimization and statistics The chapters reflect the topics discussed at the workshop W Optimum Design and Related Statistical Issues that took place in Juan les Pins France in May 2005 The title of the workshop was chosen as a light hearted celebration of the work of Henry Wynn It was supported by the Laboratoire I3S CNRS Universit e de Nice Sophia Antipolis to which Henry is a frequent visitor The topics covered partly reflect the wide spectrum of Henry s research interests Algorithms for constructing optimal designs are discussed in Chap 1 where Henry s contribution to the field is acknowledged Steepest ascent algorithms used to construct optimal designs are very much related to general gradient algorithms for convex optimization In the last ten years a significant part of Henry s research was devoted to the study of the asymptotic properties of such algorithms This topic is covered by Chaps 2 and 3 The work by Alessandra Giovagnoli concentrates on the use of majorization and stochastic ordering and Chap 4 is a hopeful renewal of their collaboration One of Henry s major recent interests is what is now called algebraic statistics the application of computational commutative algebra to statistics and he was partly responsible for introducing the experimental design sub area reviewed in Chap 5 One other sub area is the application to Bayesian networks and Chap 6 covers this with Chap 7 being strongly related

Dynamic Process Modeling, 2013-10-02 Inspired by the leading authority in the field the Centre for Process Systems Engineering at Imperial College London this book includes theoretical developments algorithms methodologies and tools in process systems engineering and applications from the chemical energy molecular biomedical and other areas It spans a whole range of length scales seen in manufacturing industries from molecular and nanoscale phenomena to enterprise wide optimization and control As such this will appeal to a broad readership since the topic applies not only to all technical processes but also due to the interdisciplinary expertise required to solve the challenge The ultimate reference work for years to come
